Preparing Data Model for Cadaster Geo-database

1. Introduction:

1.1. Data modelling:

It is a process that creates a data model for the data to be stored in a database. This data model is a conceptual representation of datasets, its associations between different datasets and the rules. The main purpose of data modelling is that it helps in the visual representation of data and enforces rules, regulatory compliances, and government policies on the data. The data models also certifies consistency in naming conventions, semantics, default values and security while guaranteeing data quality.

1.2. Data model:

Data models are fundamental entities, which defines the connections among the datasets along with its processing and storage inside a system. It organizes data description, data semantics and consistency constraints of data. The data model emphasizes on what data is needed and how it should be organized instead of what operations will be performed on the data. Data model ensures the appropriate way in which database management systems are structured in order to optimize the data handling. The modelling team is using geographic data to be organized in a Geographic Information System (GIS) domain. A tentative conceptual model for designing a geo-database is prepared which can be seen as a schema in the annexures. Its refinement is a continuous process, however, the provided geo-database design is readily enough for collection/preparation of data usable for GIS purpose. The data developed based on the provided template will be validated, refined, and transformed into the final geo-database.

In order to create digital maps that will be used in any GIS, it is critically important that a data modeling process has been undertaken. Data modeling provides the set of rules on how spatial information can be intelligently structured as the basis for map production in a GIS.

1.3. Importance of Data Model:

The vital goals of using a data model are as follows:

- It makes sure that all datasets required by the database are accurately represented. Any data omission will lead to creation of incorrect results
- It assists in the design of database at physical, conceptual and logical levels
- Its structure aids to define the relational tables, primary and foreign keys and stored processes
- It provides a clear picture of the base data
- It is helpful in the identification of missing and redundant data

Although the initial creation of data model is time consuming but in long run, it makes the IT infrastructure to upgrade and the maintenance is faster.

1.4. Geodatabase in ArcGIS:

An ArcGIS geodatabase is an assembly of geographic datasets of numerous forms held in a common file system folder, or a multiuser relational database management system (DBMS) such as Oracle, Microsoft SQL Server, Post-GreSQL, or IBM DB2. The geodatabase is the native data structure for ArcGIS and is the primary data format used for editing and data management. While ArcGIS works with geographic information in numerous geographic information system (GIS) file formats, it is designed to work with and leverage the capabilities of the geodatabase. It is the physical store of geographic information, primarily using a DBMS or file system. You can access and work with this physical instance of your collection of datasets either through ArcGIS or through a database management system using SQL. Geodatabase have a comprehensive information model for representing and managing geographic information. This information model is implemented as a series of tables holding feature classes and attributes.

2. Levels of Abstraction in Data Modelling for Cadaster Database:

There are different levels of abstraction of cadaster database in data modelling. These levels are classified on the basis of necessary tasks to be undertaken in a systematic way that will initiate the development of a conceptual model. These levels will also help in the development of a conceptual schema and a data model for the development of spatial database. The main levels of abstractions area as follows:

- **First level:** Understanding the existing system
- **Second level:** Conceptual model
- **Third level:** Logical model / Data structure
- **Fourth level:** Physical model / Acute file structure
- **Fifth level:** Creation of digital maps

If data modeling has been done well, the maps should have the necessary intelligence to be optimally used for GIS purposes.

2.1. Data Collection (Methods of data Input):

The methods for data collection and input will be used to prepare a GIS based cadaster database. The different methods are as follows:

- i. **Scanning**
- ii. **Geo-referencing**
- iii. **Digitizing**
- iv. **Field Work**
- v. **Keyboard data entry**
- vi. **Data Validation**

After the preparation of GIS data adopting the proposed methodology for mapping in urban areas and state land, the next stage is to assemble the GIS data into a GIS-based cadaster database to support the existing Land Records Management & Information Systems (LRIMS). The conceptual flow of data from its actual collection and preparation towards GIS-based cadaster database is shown in Figure 1.

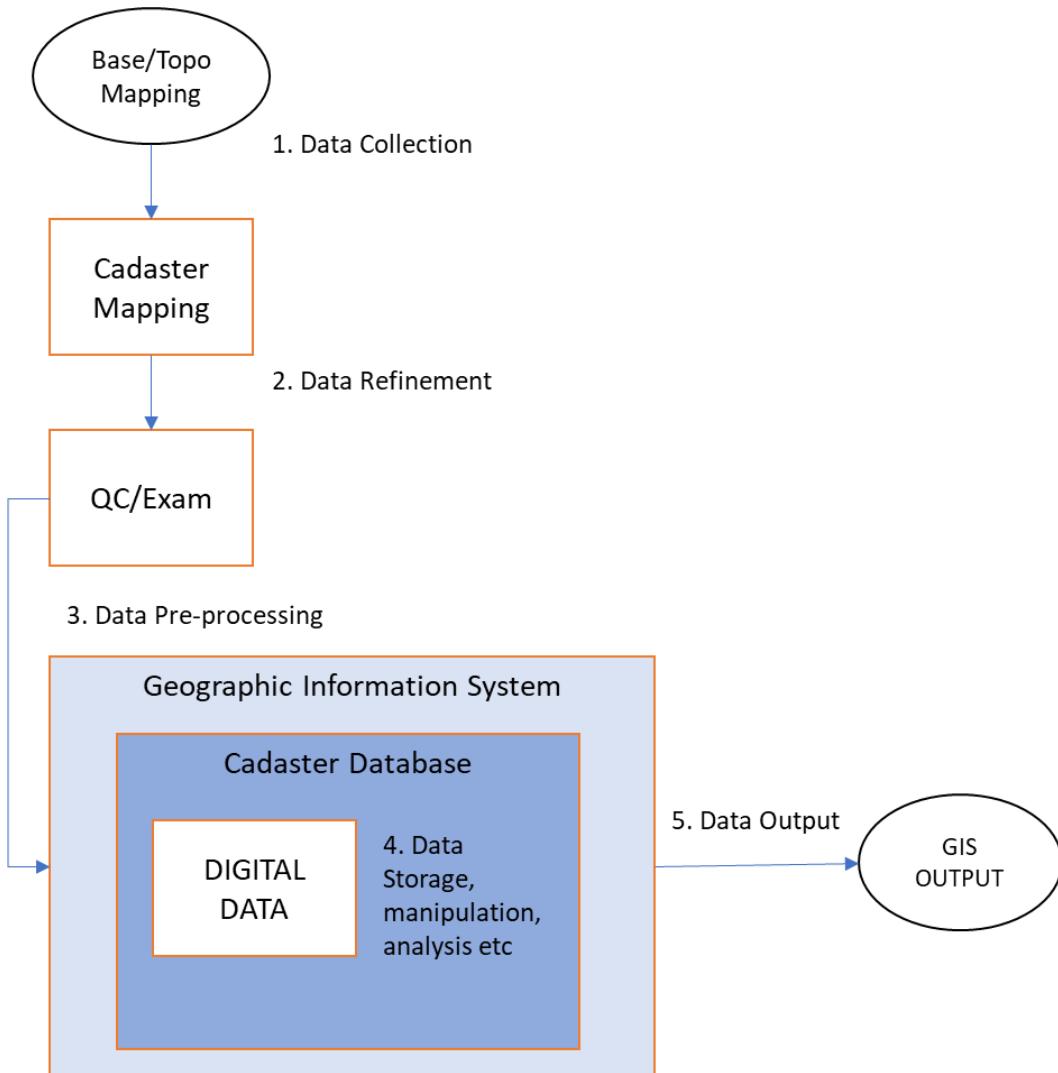

Figure 1: Conceptual flow of data

Figure 1 shows that after preparation of the Topo-based cadaster map into digital format (shape file), it must be ensured that the collected data is Up-to-date and accurate. The process of data refinement will include validating, editing, and correcting the data and lastly the data would need to be transformed or stored into an organized form (database designed based on prepared data model).

2.2. Data Transformation:

The Data transformation processes will be performed after the data collection techniques. The following steps will be executed in the process of data transformation.

- i. After the collection of data and preparation of the topo-based cadaster map into digital format (shape file), it must be ensured that the collected data is Up-to-date and accurate.
- ii. The data would need to be transformed /stored into an organized form (database designed based on prepared data model).
- iii. Data refinement will include validating, editing, and correcting the data, and may also require other manipulations such as data transformations or reclassifications. I.e. that may be necessary to transform data so that the data can be used for specific GIS-based Cadaster Management System.
- iv. The GIS data would be examined for typical topological errors caused during the map digitizing process like overshoots, undershoots, loops or knots, duplicate lines, etc.

2.3. Testing and Validation:

The system testing, validation and removal of any deficiency will track the following process:

- i. The System testing and implementation will be an iterative process that will be continued till the completion /after of the project for ensuring its sustainability.
- ii. After the completion of the project, data will also be held in custody of Survey of Pakistan (SoP) therefore, the development of a support system will also be planned for ensuring its sustainability.
- iii. Include the development of a procedure to integrate the existing cadastral system with the newly developed system.
- iv. Technical and support documents will also be drafted.
- v. Technical guidelines for managing data in the SoP data center should be developed.

Modeling and Designing Database

The team employed on the task of developing conceptual model and designing geo-database has already been working on the given task since the preliminary preparation phase of the project. The following tasks has been planned / are being carried out during the execution of the project.

1. Methodology for System Design and Development:

1.1. Requirement Analysis:

- Review of the current system Cadaster database/system to comprehend the business process
- Assess the user needs of a digital Cadaster database
- Analyze issues related to the existing Manual System

1.1.1. Present Status:

- Review of the current system Cadaster database/system that will be continuous study and the regional directorates are expected to provide assistance for coordination with the relevant stakeholders in all province including AJ&K.
- The SoP's team also intends to meet and discuss with the technical teams of PLRA and other data custodians preferably database users for detailed requirement analysis in order to understand their data requirements, and the functional requirements including user-defined operations or transaction like division, merging and registration of the Parcels, record retrievals, updates, etc., that are to be applied on the database.
- With the in-depth study of existing digital system being run or under plan in all the provinces will be utilized for modelling the system for its re-designing and re-engineering as per international standards and practices to make it compatible with GIS data (Cadaster maps).
- The team is being studying and assessing the user needs of a digital Cadaster database for finalizing the deliverable to be shared with stakeholders including revenue authorities.

1.2. System Specification: Based on Requirement Analysis:

1.2.1. System Development:

- Undertake systems re-designing and re-engineering as per international standards and practices
- UML (Enterprise Architect)
- XML Schemas
- Development of a prototype and its evaluation

1.2.2. Present Status

- i. During the pilot projects undertaken by DPO/NO, 08 party, a prototype based conceptual model has already been developed and all the data prepared in the pilot projects are based on the geo-database template provided by the team.
- ii. The GIS data prepared on the draft template in G-6 Sector is implemented on developing Digital Cadaster by converting it into cadaster using parcel Fabrics (ArcGIS platform). The cadaster data will be handled at SoP using ArcGIS /Arc-SDE platform. The final data will be handed over/shared with the stakeholders in the shape of geo-database designed on the SoP developed Model and the stakeholders will have to decide on their own either to use already developed tools or customized tools for handling the cadaster data and integrating it into their existing LRMIS.
- iii. The base geo-database template will be provided by the team to start work on data received from stakeholders. The data developed based on the provided template will be validated after its submission to the project secretariat.

1.3. System Implementation:

- i. The tentative Cadastral Conceptual Schema, Basic Data Model and geo-database design has been framed is ready to share with the directorates.
- ii. The base data developed in the provided geo-database after verification be submitted to the Project Secretariat there in it will be converted into usable cadaster database before handing over the same to the partner users.

Unified Cadastral system

The lack of interoperability (i.e. combining of cadaster information data from various stakeholders in a consistent way without involving any effort) and quality of cadaster data is a great challenge. In order to solve these problems it is necessary to take measures of coordination between the stakeholders of cadaster system. The Directive of the honorable Prime Minister (PM) is to establish an infrastructure for unified cadaster system.

The unified cadaster system will be based on already developed analog provincial cadaster system. To ensure cadaster data quality and interoperability, method and rules addressing these challenges of the infrastructure are being specified.

The participation of stakeholders is very crucial for improvement and implementation of the tentative cadaster model. For this reason, to reach on consensus Survey of Pakistan team met with various stakeholders.

1. Main objectives:

The main objectives of the formation of unified cadastral system are as follows:

1. To promote and facilitate sharing, exchange, dissemination and use of cadaster information among stakeholders
2. To ensure accuracy, correctness and consistency of cadaster information

2. Unified and Integrated Cadaster System:

To integrate cadaster information, a number of aspects are to be considered as shown in Figure 2.

2.1. Data Model and Database Schema:

- a. Data Model
- b. Scale
- c. Database Schema/ Structure

2.2. Spatial Reference System (Coordinate System):

The main commonly used spatial reference systems in Pakistan are WGS 1984, LCC, and UTM. Moreover, the UTM zones for Pakistan are 41N, 42N and 43N as Pakistan lies to the north of the equator.

2.3. Quality Check

The quality check consists of the following two main process:

- a) Accuracy

b) Consistency

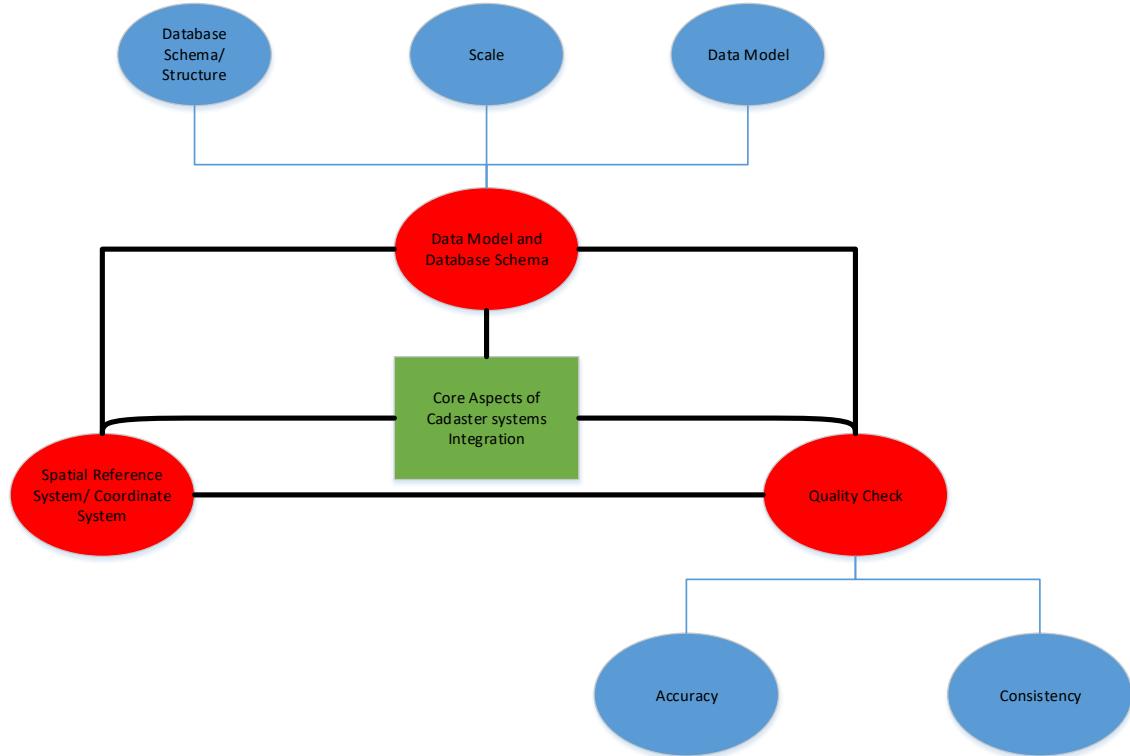

Figure 2: Conceptual Model for Unified Cadaster System

The objectives are to propose a design of a Spatio-textual database (both in Xml format and platform based database)

- ❖ To make all the parcel based registration operations
- ❖ To fulfill the requirements for querying spatial, and tenure based textual record for cadastral data,
- ❖ To connect Surveys, GIS and MIS for cadaster management

3. Data Model and Database Schema:

The tentative Database schema is shown in Figure 14. The detailed cadastral schema model can also be seen in the annexures. The tentative database schema consists of the following table and feature classes:

3.1. Control Feature Class:

It represents the control points that are used during the process of geo-referencing. They can include the ground control points that are acquired through the survey team. It is important to first plot all ground control points and enter proper description in the area of interest. The main attributes in Control feature class are shown in Figure 3.

OBJECTID *	SHAPE *	Control Point ID	Type	Elevation	Name	Description

Figure 3: The main attributes in Control feature class

3.2. Ground Control Point Feature Class:

It represents the control points that are used during the process of geo-referencing. They can include the ground control points that are acquired through the survey team. It is important to first plot all ground control points and enter proper description in the area of interest. The main attributes in Control feature class are shown in Figure 4.

OBJECTID *	SHAPE *	Control Point ID	Name	Type	Elevation	Remarks

Figure 4: The main attributes in ground control point feature class

3.3. Parcel Feature Class

It represents the parcel of any village/Municipality that represents the land type field according to revenue records. After plotting control points parcel data have to be digitized and all relevant information needs to be entered. This process could be classified as follow:

- Territory Information record creation for area of interest
- Digitization of Parcels
- Proper land classification
- Parcel specific information entry
- Before parcel digitization, territory table creation is very important.
- This table contains administrative boundaries information e.g., Province, District, Tehsil, etc.
- Specific administrate unit could be access using “territory_ID”

The main attributes in Parcel feature class are shown in Figure 5.

OBJECTID*	SHAPE*	Parcel ID*	Territory ID	Sub Khasra	Khasra	Square No.	Mussavi No.	Dimension	Feet per Marla	Effective From	Effective To	Remarks	SHAPE_Length	SHAPE_Area

Figure 5: The main attributes in Parcel feature class

3.4. Territory Table:

Territory table is used for recording administrative units’ information like name of a village, its tehsil, district, province name etc. Territory ID segregates the administrative area unit. The main attributes in territory table are shown in Figure 6.

OBJECTID*	Territory ID	Massavi Number	Mauza	Town	Chak Unit	Patwar Circle	Qanoongo Halqa	Master Plan	Cantonment	Tahsil	District	Division	Province	Effective From	Effective To	Description

Figure 6: The main attributes in territory table

Territory ID is in the following format.

Territory ID						
Province	Division	District	Tehsil	Urban/ Rural	Revenue Village ID/ Municipal	
					0 / 1	

To understand the territory ID let’s take an example, suppose we have tarlai village of Tehsil & Distt. Rawalpindi, and tarlai village hadbast number is 41, for this the **territory ID** will be in the form “01110101041”, in this code the first two digit “01” represents the Punjab province, next two digit “11”

represent the Rawalpindi division, next two digit “01” represents the Rawalpindi district, next two digit represents “01” represents Rawalpindi tehsil, and the “0” represent rural area and “41” represents village “Tarlai”.

3.5. Land use Table:

The land use table is for recording land use information like residential, medical facility etc. The main attributes in land use table are shown in Figure 7.

OBJECTID*	Land Use ID	Parcel ID*	Territory ID	Land Use Type	Land Use Subtype	Effective From	Effective To	Remarks
0								
LandUseTable								

Figure 7: The main attributes in land use table

3.6. Parcel Info Table

Parcel information table records complementary information about parcel like, house number, street number, sector number etc. The main attributes in parcel info table are shown in Figure 8.

Parcel ID*	Territory ID	Floor No	House No	Flat No	Shop No	Office No	Property No	Property Name	Street No.	Sub Sector	Sector	Housing Society	Block	Zone	Remarks
0															
Parcel_InfoTable															

Figure 8: The main attributes in Parcel info table

3.7. Shajra Nasab Table:

The main use of shajra nasab table is to record personal (name, id, profession etc.) and family related information. The main attributes in Shajra nasab table are shown in Figure 9.

A screenshot of a software application window titled "ShajraNasabTable". The window displays a table with the following columns: OBJECTID*, Person ID*, Person Name, Gender, Husband ID, Mother ID, Father ID, Dep. Person ID, finger Impression, Alive, Contact No., Family, Sub Caste, Caste Nam, Sect, Religion, Profession, and Remarks. Below the table, a message indicates "(0 out of 0 Selected)".

OBJECTID*	Person ID*	Person Name	Gender	Husband ID	Mother ID	Father ID	Dep. Person ID	finger Impression	Alive	Contact No.	Family	Sub Caste	Caste Nam	Sect	Religion	Profession	Remarks
ShajraNasabTable																	

Figure 9: The main attributes in Shajra nasab table

3.8. Record of Right Table:

This table is used to record ownership record of any parcel. The main attributes in record of rights table are shown in Figure 10.

A screenshot of a software application window titled "RecordOfRightsTable". The window displays a table with the following columns: OBJECTID*, Parcel ID*, Territory ID, Person ID*, Floor No, Organization, Previous Owner ID, Intiqal Type, Ownership Type, sharingPercentage, ownershipStartDate, ownershipEndDate, and remarks. Below the table, a message indicates "(0 out of 0 Selected)".

OBJECTID*	Parcel ID*	Territory ID	Person ID*	Floor No	Organization	Previous Owner ID	Intiqal Type	Ownership Type	sharingPercentage	ownershipStartDate	ownershipEndDate	remarks
RecordOfRightsTable												

Figure 10: The main attributes in Record of rights table

3.9. Forest Table:

The forest table is used to record forest related information such as forest name, forest type, forest category etc. The main attributes in forest table are shown in Figure 11.

A screenshot of a software application window titled "ForestTable". The window displays a table with the following columns: Parcel ID, Territory ID, Forest Name, Forest Type, Forest Category, Sub Compartment, Compartment Name, Forest Zone, Working Circle, Working Plan, Notification, and Source. Below the table, a message indicates "(0 out of 0 Selected)".

Parcel ID	Territory ID	Forest Name	Forest Type	Forest Category	Sub Compartment	Compartment Name	Forest Zone	Working Circle	Working Plan	Notification	Source
ForestTable											

Figure 11: The main attributes in Forest table

3.10. Khatuni Table:

The main purpose of the Khatuni table is to represent farmer information of parcel. The main attributes in Khatuni table are shown in Figure 12.

A screenshot of a GIS application's attribute editor for the 'KhatuniTable'. The window title is 'Table' and the specific table name is 'KhatuniTable'. The table structure is defined by a header row with columns: OBJECTID*, Parcel ID, Territory ID, Person ID, From Date, To Date, and Remarks. Below the header, there is a data grid area which is currently empty. At the bottom of the editor, there is a toolbar with various icons and a status bar indicating '(0 out of 0 Selected)'.

OBJECTID*	Parcel ID	Territory ID	Person ID	From Date	To Date	Remarks

Figure 12: The main attributes in Khatuni table

3.11. Possession Table:

The main purpose of the possession table is to represent possession information of parcel according to the person information. The main attributes in Possession table are shown in Figure 13.

A screenshot of a GIS application's attribute editor for the 'PossessionTable'. The window title is 'Table' and the specific table name is 'PossessionTable'. The table structure is defined by a header row with columns: OBJECTID*, Parcel ID, Territory ID, Person ID, Possession, and remarks. Below the header, there is a data grid area which is currently empty. At the bottom of the editor, there is a toolbar with various icons and a status bar indicating '(0 out of 0 Selected)'.

OBJECTID*	Parcel ID	Territory ID	Person ID	Possession	remarks

Figure 13: The main attributes in Possession table

3.12. Agriculture Tax Table:

Since the existing cadastral system is agriculture specific therefore the developed system is designed to cope with the agriculture system needs and can be joined with existing system. The main attributes in Agriculture tax table are shown in Figure 14.

Parcel ID	Territory ID	Area Value	Irrigation Source	Crop Type	Crop Area	Tax Rate	Haboob	Maalia	Laagan	Tax Period From	Tax Period To	Remarks
0												

Figure 14: The main attributes in Agriculture tax table

3.13. Tax Table:

The tax table represent tax to be collected from an individual person. The main attributes in Tax table are shown in Figure 15.

OBJECTID*	Parcel ID	Territory ID	Area Value	Tax Rate	Tax Amount	taxPeriodFrom	taxPeriodTo	Remarks
0								

Figure 15: The main attributes in Tax table

3.14. Tentative Database Schema:

The tentative database schema represent the relationship between different tables that are used in the cadastral system. The main attributes in each table in the tentative database schema are shown in Figure 16.

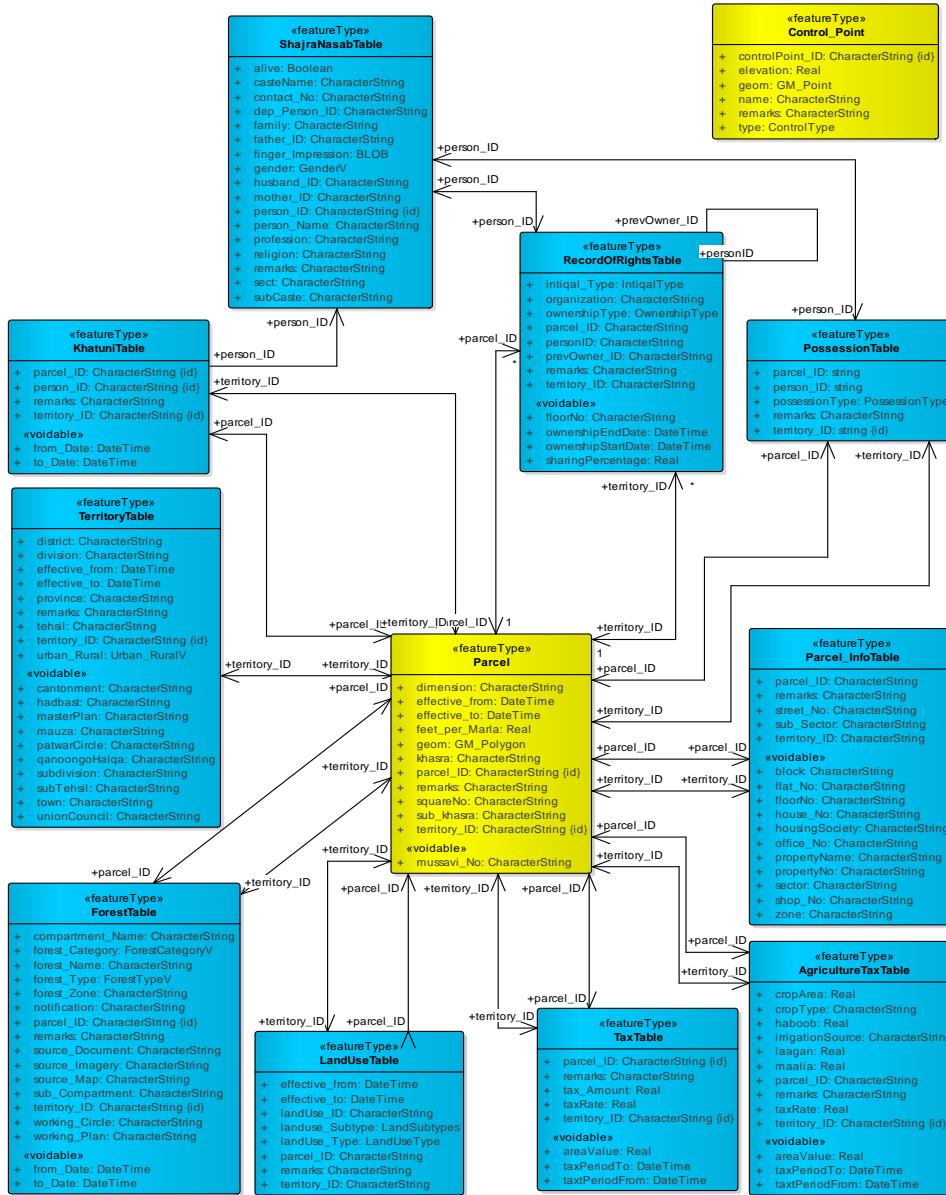

Figure 16: Tentative Database Schema

4. Scale and Tolerance:

	Scale	Distance Tolerance	Area Accuracy
Rural Areas	1:500 up to 1:1000	8cm to 16cm	0.5 m ²
Urban Area	1:500	8cm	0.2 m ²

5. Spatial reference system /Coordinate System:

The UTM projection coordinate system should be used for unified cadaster system. The UTM zones for Pakistan are 41N, 42N and 43N as Pakistan lies to the north of the equator.

6. Quality Check (QC):

To get the required data the QC has very crucial role, it ensures accuracy and consistency of the data populated in the system. The two important components of the QC are as follow:

1. Accuracy
 - a. Geometric Accuracy
 - b. Attribute Accuracy
2. Consistency

7. Requirement of Geometric and Attribute Accuracy:

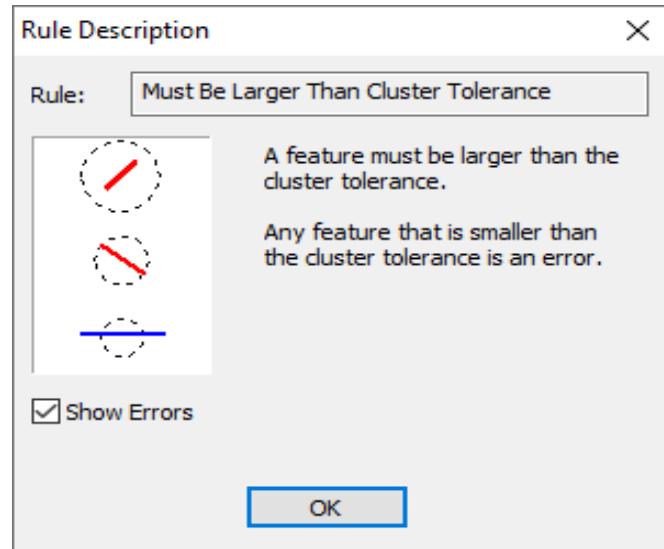

7.1. Geo-referencing of Mussavi (Cadastral Map):

Digitize parcel accuracy is influenced by Georeferencing RMS (Root Mean Square) error therefore the RMS error should be less than the tolerance distance.

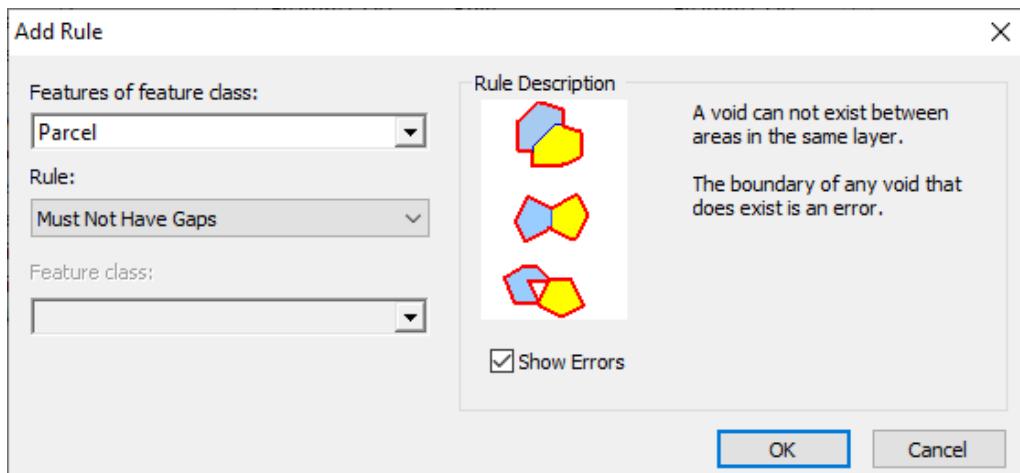

7.2. Digitization of Parcel on the Imagery or Mussavi:

The main processes performed in the digitization of parcel on the imagery or Mussavi are as follows:

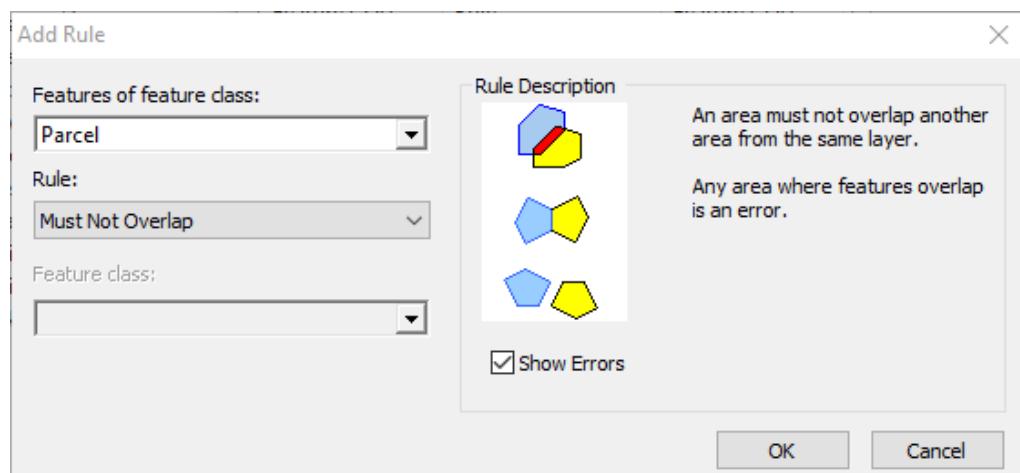

1. Digitization of satellite imagery shall be performed as database schema with attribute information related to the parcel of land. While storing the attribute information, the textual details on the plan shall be converted into English language and stored in the GIS database.
2. Digitize all the features present on plan i.e. parcel, roads, water channels, graveyards, and other similar features.
3. Parcels should be properly digitized, e.g., while digitization line segments centerline of feature should be digitized
4. Parcel segment must be larger than the tolerance distance

5. There should be no any gaps between parcels;

6. Parcels must not overlap

7. While parcel digitization unwanted Back loop and spike must not occur

8. The attribute should be properly entered

8. Consistency:

The geometry and attributes should be consistent with respect to the other parcel and Mussavis.

talabi

-- Definition --

Irrigated by tank.

[Is static False. Containment is Not Specified.]

AgricultureTaxTable

Class «featureType» in package 'Cadastral_Schema_Model'

-- Name --

AgricultureTaxTable

-- Definition --

Is the tax payable on the former.

AgricultureTaxTable

Version 1.0 Phase 1.0 Proposed

ATTRIBUTES

◆ areaValue : Real Public

-- Name --

areaValue

-- Definition --

Recorded area value providing an area quantification.

[Stereotype is «voidable». Is static False. Containment is Not Specified.]

◆ cropArea : Real Public

-- Name --

cropArea

-- Definition --

represents area covered by specific crop.

[Is static False. Containment is Not Specified.]

◆ cropType : CharacterString Public

-- Name --

cropType

-- Definition --

represents the cultivated crops.

[Is static False. Containment is Not Specified.]

◆ haboob : Real Public

-- Name --

haboob

-- Definition --

It is used to save the rent/tax that is applied on this khewat by the government. haboob is the type of maalia.

[Is static False. Containment is Not Specified.]

ATTRIBUTES
<p>◆ irrigationSource : CharacterString Public</p> <p>-- Name -- irrigationSource -- Definition -- Represents source op irrigation</p> <p>[Is static False. Containment is Not Specified.]</p>
<p>◆ laagan : Real Public</p> <p>-- Name -- laagan -- Definition -- Revenue/ Tax collected from the Tenant Cultivator.</p> <p>[Is static False. Containment is Not Specified.]</p>
<p>◆ maalia : Real Public</p> <p>-- Name -- maalia -- Definition -- It is used to save the rent/tax that is applied on this khewat by the government.</p> <p>[Is static False. Containment is Not Specified.]</p>
<p>◆ parcel_ID : CharacterString Public</p> <p>-- Name -- Parcel_ID -- Definition -- represents the unique id of a parcel in the Pakistan.</p> <p>[Is static False. Containment is Not Specified.]</p>
<p>◆ remarks : CharacterString Public</p> <p>-- Name -- remarks -- Definition -- Represents any additional remarks</p> <p>[Is static False. Containment is Not Specified.]</p>
<p>◆ taxPeriodTo : DateTime Public</p> <p>-- Name -- taxPeriodTo -- Definition -- represents the date up to which tax due.</p> <p>[Stereotype is «voidable». Is static False. Containment is Not Specified.]</p>
<p>◆ taxRate : Real Public</p>

ATTRIBUTES

-- Name --

taxRate

-- Definition --

it represents tax rate

[Is static False. Containment is Not Specified.]

◆ taxPeriodFrom : DateTime Public

-- Name --

taxPeriodFrom

-- Definition --

represents the date from which tax due.

[Stereotype is «voidable». Is static False. Containment is Not Specified.]

◆ territory_ID : CharacterString Public

-- Name --

territory_ID

-- Definition --

represents the unique id of a territory in the Pakistan.

[Is static False. Containment is Not Specified.]

BarrenLand

Class «codeList» in package 'Cadastral_Schema_Model'

-- Name --

Barren Land

-- Definition --

represents the possible values of barren features.

BarrenLand

Version 1.0 Phase 1.0 Proposed

ATTRIBUTES

◆ bareRock : Public

-- Name --

bareRock (Bare Rock)

-- Definition --

areas characterized by bare rock, with little or no "green" vegetation present.

[Is static False. Containment is Not Specified.]

◆ brokenGround : Public

-- Name --

brokenGround (Broken Ground)

-- Definition --

a relief feature found mostly in dry regions around rivers and streams. It is land around river, which is totally weathered (exfoliated) due to alternate cooling and heating.

[Is static False. Containment is Not Specified.]

◆ clay : Public

-- Name --

clay

-- Definition --

areas characterized by clay, with little or no "green" vegetation present.

[Is static False. Containment is Not Specified.]

◆ coalfield : Public

-- Name --

coalfield

-- Definition --

an area which is rich in coal, and where coal is mined

[Is static False. Containment is Not Specified.]

◆ debris : Public

-- Name --

debris

ATTRIBUTES

-- Definition --

areas characterized by debris(scattered pieces of waste or remains), with little or no "green" vegetation present.

[Is static False. Containment is Not Specified.]

◆ gasField : Public

-- Name --

gasField (Gas Field)

-- Definition --

a gas field is an area of natural gas underground, produced by decay of organic material.

[Is static False. Containment is Not Specified.]

◆ goldfield : Public

-- Name --

goldfield

-- Definition --

an area which is rich in gold, and where gold is mined

[Is static False. Containment is Not Specified.]

◆ gravel : Public

-- Name --

gravel

-- Definition --

areas characterized by gravel, with little or no "green" vegetation present.

[Is static False. Containment is Not Specified.]

◆ oilfield : Public

-- Name --

oilfield

-- Definition --

an area of land or seabed underlain by strata yielding petroleum, especially in amounts that justify commercial exploitation.

[Is static False. Containment is Not Specified.]

◆ opalField : Public

-- Name --

opalField (Opal Field)

-- Definition --

an area which is rich in opal, and where opal is mined

[Is static False. Containment is Not Specified.]

ATTRIBUTES

◆ other : Public

-- Name --

other

-- Definition --

represent such types which are not included in the list

[Is static False. Containment is Not Specified.]

◆ quarry : Public

-- Name --

quarry

-- Definition --

a place where rocks, sand, or minerals are extracted from the surface of the Earth. A quarry is a type of mine called an open-pit mine, because it is open to the Earth's surface.

[Is static False. Containment is Not Specified.]

◆ saltpan : Public

-- Name --

saltpan

-- Definition --

a shallow container or depression in the ground in which salt water evaporates to leave a deposit of salt.

[Is static False. Containment is Not Specified.]

◆ sand : Public

-- Name --

sand

-- Definition --

areas characterized by sand, with little or no "green" vegetation present.

[Is static False. Containment is Not Specified.]

◆ sandDam : Public

-- Name --

sandDam (Sand Dam)

-- Definition --

a sand dam is a reinforced rubble cement wall built across a seasonal sandy river. They are a simple, low cost, low maintenance technology that retains rainwater and recharges groundwater.

[Is static False. Containment is Not Specified.]

◆ scree : Public

-- Name --

scree

-- Definition --

a mass of small loose stones that form or cover a slope on a mountain.

[Is static False. Containment is Not Specified.]

Bridge

Class «codeList» in package 'Cadastral_Schema_Model'

-- Name --

Bridge

-- Definition --

possible values of a structure carrying a road, path, railway, etc. across a river, road, or other obstacle.

Bridge

Version 1.0 Phase 1.0 Proposed

ATTRIBUTES

◆ aqueduct : Public

-- Name --

aqueduct

-- Definition --

an artificial channel for conveying water, typically in the form of a bridge across a valley or other gap.

[Is static False. Containment is Not Specified.]

◆ boatBridgeDouble : Public

-- Name --

boatBridgeDouble (Boat Bridge Double)

-- Definition --

more than one rows of specialized, shallow draft boats or floats, connected together to cross a river or canal, with a track or deck attached on top.

[Is static False. Containment is Not Specified.]

◆ boatBridgeSingle : Public

-- Name --

boatBridgeSingle (Boat Bridge Single)

-- Definition --

a collection of specialized, shallow draft boats or floats, connected together to cross a river or canal, with a track or deck attached on top.

[Is static False. Containment is Not Specified.]

◆ cantilever : Public

-- Name --

cantilever

-- Definition --

a long projecting beam or girder fixed at only one end, used in bridge construction.

[Is static False. Containment is Not Specified.]

◆ culvertOnRoad : Public

ATTRIBUTES

-- Name --

culvertOnRoad (Culvert on Road)

-- Definition --

a structure that allows water to flow under a road. Typically embedded so as to be surrounded by soil, a culvert may be made from a pipe, reinforced concrete or other material.

[Is static False. Containment is Not Specified.]

◆ culvertOnTrack : Public

-- Name --

culvertOnTrack (Culvert on Track)

-- Definition --

a structure that allows water to flow under a track. Typically embedded so as to be surrounded by soil, a culvert may be made from a pipe, reinforced concrete or other material.

[Is static False. Containment is Not Specified.]

◆ footBridge : Public

-- Name --

footBridge (Foot Bridge)

-- Definition --

a bridge designed for pedestrians and in some cases cyclists, animal traffic, and horse riders, instead of vehicular traffic.

[Is static False. Containment is Not Specified.]

◆ irishBridge : Public

-- Name --

irishBridge (Irish Bridge)

-- Definition --

a low-water crossing, under high-flow conditions, water runs over the roadway and precludes vehicular traffic.

[Is static False. Containment is Not Specified.]

◆ ironBridge : Public

-- Name --

ironBridge (Iron Bridge)

-- Definition --

a bridge formed by iron lattice girders

[Is static False. Containment is Not Specified.]

◆ jettyRailway : Public

-- Name --

jettyRailway (Jetty Railway)

-- Definition --

represents railway on jetty

[Is static False. Containment is Not Specified.]

ATTRIBUTES

◆ jettyRoad : Public

-- Name --

jettyRoad (Jetty Road)

-- Definition --

represents road on jetty

[Is static False. Containment is Not Specified.]

◆ other : Public

-- Name --

other

-- Definition --

represent such types which are not included in the list

[Is static False. Containment is Not Specified.]

◆ railwayOverRailway : Public

-- Name --

railwayOverRailway (Railway over Railway)

-- Definition --

railway flyover crossing another railway track

[Is static False. Containment is Not Specified.]

◆ railwayOverRoad : Public

-- Name --

railwayOverRoad (Railway over Road)

-- Definition --

railway flyover crossing road

[Is static False. Containment is Not Specified.]

◆ roadOverRailway : Public

-- Name --

roadOverRailway (Road over Railway)

-- Definition --

road flyover crossing railway track.

[Is static False. Containment is Not Specified.]

◆ roadOverRoad : Public

-- Name --

roadOverRoad (Road over Road)

-- Definition --

road flyover crossing another road.

[Is static False. Containment is Not Specified.]

◆ suspensionBridge : Public

ATTRIBUTES

-- Name --

suspensionBridge (Suspension Bridge)

-- Definition --

a bridge in which the weight of the deck is supported by vertical cables suspended from further cables that run between towers and are anchored in abutments at each end.

[Is static False. Containment is Not Specified.]

◆ viaduct : Public

-- Name --

viaduct

-- Definition --

a long bridge like structure, typically a series of arches, carrying a road or railway across a valley or other low ground.

[Is static False. Containment is Not Specified.]

◆ walkway : Public

-- Name --

walkway

-- Definition --

A passage or path for walking along, especially a raised passageway connecting different sections of a building or a wide path in a park or garden

[Is static False. Containment is Not Specified.]

CommunicationV

Class «codeList» in package 'Cadastral_Schema_Model'

-- Name --

CommunicationV (Communication Value)

-- Definition --

represents possible values of communication feature

CommunicationV

Version 1.0 Phase 1.0 Proposed

ATTRIBUTES

◆ broadcastingStation : Public

-- Name --

broadcastingStation (Broadcasting Station)

-- Definition --

a station equipped to broadcast radio or television programs.

[Is static False. Containment is Not Specified.]

◆ lighthouse : Public

ATTRIBUTES

-- Name --
lighthouse

-- Definition --
a large coastal tower exhibiting a major light source serving as an aid to navigation.

[Is static False. Containment is Not Specified.]

◆ telecomTower : Public

-- Name --
telecomTower (Telecommunications Tower)

-- Definition --
telecommunications tower is the generic description of Radio masts and towers built primarily to hold telecommunications antennas

[Is static False. Containment is Not Specified.]

CommunityFacilities

Class «codeList» in package 'Cadastral_Schema_Model'

-- Name --
Community Facilities

-- Definition --
Represents possible values of community facilities.

CommunityFacilities
Version 1.0 Phase 1.0 Proposed

ATTRIBUTES

◆ abattoir : Public

-- Name --
abattoir

-- Definition --
a slaughterhouse, a place where animals are butchered

[Is static False. Containment is Not Specified.]

◆ bank : Public

-- Name --
bank

-- Definition --
a commercial bank is a financial institution that provides various financial service, such as accepting deposits and issuing loans.

[Is static False. Containment is Not Specified.]

◆ busStand : Public

-- Name --

ATTRIBUTES

busStand (Bus Stand)

-- Definition --

bus stop inside bus station.

[Is static False. Containment is Not Specified.]

◆ busStop : Public

-- Name --

busStop (Bus Stop)

-- Definition --

a designated place where buses stop for passengers to board or alight from a bus.

[Is static False. Containment is Not Specified.]

◆ carPark : Public

-- Name --

carPark

-- Definition --

Green-areas in cities and densely populated areas facilitated for recreational use. Characterized by lawns, benches, walkways, planting, water fountains etc.

[Is static False. Containment is Not Specified.]

◆ cngStation : Public

-- Name --

cngStation (CNG Station)

-- Definition --

a retail station for servicing vehicles with CNG

[Is static False. Containment is Not Specified.]

◆ coalDepot : Public

-- Name --

coalDepot (Coal Depot)

-- Definition --

a place at which coal may be deposited, stored, etc.

[Is static False. Containment is Not Specified.]

◆ communityCenter : Public

-- Name --

Community Center

-- Definition --

a place where people from a particular neighbourhood can meet for social events, education classes, or recreational activities.

[Is static False. Containment is Not Specified.]

◆ courtHouse : Public

-- Name --

ATTRIBUTES

courtHouse (Court House)

-- Definition --

a facility used for holding courts of law and the operation or administration of judicial authorities and commissions.

[Is static False. Containment is Not Specified.]

◆ courtHouse : Public

-- Name --

courtHouse (Court House)

-- Definition --

a facility used for holding courts of law and the operation or administration of judicial authorities and commissions.

[Is static False. Containment is Not Specified.]

◆ embassy : Public

-- Name --

embassy

-- Definition --

a facility for the provision of Consular and Diplomatic Services.

[Is static False. Containment is Not Specified.]

◆ ferry : Public

-- Name --

ferry

-- Definition --

a boat or ship for conveying passengers and goods, especially over a relatively short distance and as a regular service.

[Is static False. Containment is Not Specified.]

◆ fireStation : Public

-- Name --

fireStation (Fire Station)

-- Definition --

a building or set of buildings used as a base for a fire brigade and its equipment.

[Is static False. Containment is Not Specified.]

◆ foodStreet : Public

-- Name --

foodStreet

-- Definition --

A food street is a pedestrianised area that has been designated for restaurants and cafes.

[Is static False. Containment is Not Specified.]

◆ functionHall : Public

-- Name --

functionHall

ATTRIBUTES

-- Definition --

a room or building for the purpose of hosting a party, banquet, wedding or other reception, or other social event.

[Is static False. Containment is Not Specified.]

❖ hafta_Bazar : Public

-- Name --

hafta_Bazar

-- Definition --

represents weekly market

[Is static False. Containment is Not Specified.]

❖ hotel : Public

-- Name --

hotel

-- Definition --

a building constructed and maintained for the accommodation of travelers.

[Is static False. Containment is Not Specified.]

❖ library : Public

-- Name --

library

-- Definition --

a building or room containing collections of books, periodicals, for use or borrowing by the public or the members of an institution.

[Is static False. Containment is Not Specified.]

❖ market : Public

-- Name --

market

-- Definition --

an area in which commercial dealings are conducted

[Is static False. Containment is Not Specified.]

❖ metrobusStation : Public

-- Name --

metrobusStation (Metro Bus Station)

-- Definition --

a public rapid transit system in Pakistan

[Is static False. Containment is Not Specified.]

❖ observatory : Public

-- Name --

observatory

ATTRIBUTES

-- Definition --

a room or building housing an astronomical telescope or other scientific equipment for the study of natural phenomena.

[Is static False. Containment is Not Specified.]

◆ other : Public

-- Name --

other

-- Definition --

represent such types which are not included in the list

[Is static False. Containment is Not Specified.]

◆ petrolDump : Public

-- Name --

petrol dump

-- Definition --

represent a petrol dump

[Is static False. Containment is Not Specified.]

◆ petrolPump : Public

-- Name --

petrolPump (Petrol Pump)

-- Definition --

a retail station for servicing vehicles with petrol

[Is static False. Containment is Not Specified.]

◆ policeStation : Public

-- Name --

policeStation (Police Station)

-- Definition --

the office or headquarters of a local police force.

[Is static False. Containment is Not Specified.]

◆ postAndTelegraphOffice : Public

-- Name --

postAndTelegraphOffice (Post and Telegraph Office)

-- Definition --

the building where postal services and telegram services are delivered.

[Is static False. Containment is Not Specified.]

◆ postOffice : Public

-- Name --

postOffice (Post Office)

-- Definition --

The building where postal services are delivered.

ATTRIBUTES

[Is static False. Containment is Not Specified.]

◆ prison : Public

-- Name --

prison

-- Definition --

a building in which people are legally held as a punishment for a crime they have committed or while awaiting trial.

[Is static False. Containment is Not Specified.]

◆ publicToilet : Public

-- Name --

public toilet

-- Definition --

A public toilet is a room or small building with toilets (or urinals) and sinks that does not belong to a particular household.

[Is static False. Containment is Not Specified.]

◆ publicWateringPlace : Public

-- Name --

publicWateringPlace (Public Watering Place)

-- Definition --

public watering place or water filter plant is a facility to provide drinkable water to locals.

[Is static False. Containment is Not Specified.]

◆ railwayStation : Public

-- Name --

railwayStation (Railway Station)

-- Definition --

a place on a railway line where trains regularly stop so that passengers can get on or off.

[Is static False. Containment is Not Specified.]

◆ rescueOffice : Public

-- Name --

rescueOffice

-- Definition --

an office/building used of rescue department

[Is static False. Containment is Not Specified.]

◆ sabziMandi : Public

-- Name --

sabziMandi

-- Definition --

Farmer's Market Green Market Greenmarket :????? ???Sabzi Mandi : (noun)

[Is static False. Containment is Not Specified.]

ATTRIBUTES

◆ sewer : Public

-- Name --

sewer

-- Definition --

an underground conduit for carrying off drainage water and waste matter.

[Is static False. Containment is Not Specified.]

◆ shop : Public

-- Name --

shop

-- Definition --

represents shop

[Is static False. Containment is Not Specified.]

◆ shoppingCenter : Public

-- Name --

shoppingCenter (Shopping Center)

-- Definition --

an area where shops are concentrated.

[Is static False. Containment is Not Specified.]

◆ shoppingMall : Public

-- Name --

Shopping Mall

-- Definition --

a large enclosed shopping area from which traffic is excluded.

[Is static False. Containment is Not Specified.]

◆ slaughterHouse : Public

-- Name --

slaughterHouse

-- Definition --

represents slaughter house

[Is static False. Containment is Not Specified.]

◆ stall : Public

-- Name --

stall

-- Definition --

a stand, booth, or compartment for the sale of goods in a market or large covered area.

[Is static False. Containment is Not Specified.]

ATTRIBUTES

◆ telecomTower : Public

-- Name --

telecomTower

-- Definition --

a mast or tower built primarily to hold telecommunications antennas

[Is static False. Containment is Not Specified.]

◆ telegraphOffice : Public

-- Name --

telegraphOffice (Telegraph Office)

-- Definition --

the department responsible for telegraph services.

[Is static False. Containment is Not Specified.]

◆ touristInformationCenter : Public

-- Name --

touristInformationCenter (Tourist Information Center)

-- Definition --

a facility used for providing information to persons who travel for pleasure.

[Is static False. Containment is Not Specified.]

◆ tuckShop : Public

-- Name --

tuckShop

-- Definition --

a shop, typically one on school premises, that sells confectionery, snacks, and soft drinks.

[Is static False. Containment is Not Specified.]

◆ utilityStore : Public

-- Name --

Utility Store

-- Definition --

is a Pakistani state-owned enterprise that operates chain stores throughout the country that provide basic commodities to the general public at prices which are lower than the open market because the government subsidizes them

[Is static False. Containment is Not Specified.]

◆ warehouse : Public

-- Name --

warehouse

-- Definition --

a large building where raw materials or manufactured goods may be stored before their export or distribution for sale.

[Is static False. Containment is Not Specified.]

ATTRIBUTES

◆ waterFiltrationPlant : Public

-- Name --

Water Filtration Plant

-- Definition --

a plant which treats raw water, which contains undesirable sediments, color, algae and other harmful organisms.

[Is static False. Containment is Not Specified.]

◆ wirelessStation : Public

-- Name --

wirelessStation (Wireless Station)

-- Definition --

a wireless communications station installed at a fixed location and used to communicate as part of wireless telephone system.

[Is static False. Containment is Not Specified.]

◆ workshop : Public

-- Name --

workshop

-- Definition --

a room or building in which goods are manufactured or repaired.

[Is static False. Containment is Not Specified.]

ControlType

Class «codeList» in package 'Cadastral_Schema_Model'

-- Name --

ControlType

-- Definition --

represents the possible values of control features.

ControlType

Version 1.0 Phase 1.0 Proposed

ATTRIBUTES

◆ benchmark : Public

-- Name --

benchmark (Benchmark (BM))

-- Definition --

a permanent marker (usually a bronze disk) at a point of determined location (elevation and possibly horizontal coordinates). In a less formal sense, it is a point of fixed location (such as a mark on a bridge abutment, a foundation, or a rock face). It can be used as a reference point for surveys in its locality.

[Is static False. Containment is Not Specified.]

◆ boundaryPillar : Public

ATTRIBUTES

-- Name --

boundaryPillar (boundary pillar)

-- Definition --

a robust physical marker that identifies the start of a land boundary or the change in a boundary, especially a change in direction of a boundary.

[Is static False. Containment is Not Specified.]

◆ canalBenchmark : Public

-- Name --

canalBenchmark (canal benchmark)

-- Definition --

it is fixed point of reference with known elevation

[Is static False. Containment is Not Specified.]

◆ distanceStone : Public

-- Name --

distanceStone (distance stone)

-- Definition --

is one of a series of numbered markers placed along a road or railway at particular intervals

[Is static False. Containment is Not Specified.]

◆ distanceStoneCanal : Public

-- Name --

distanceStoneCanal (distance stone canal)

-- Definition --

is one of a series of numbered markers placed along a canal at particular intervals

[Is static False. Containment is Not Specified.]

◆ gtBenchmark : Public

-- Name --

gtBenchmark (G.T Benchmark)

-- Definition --

the high precision benchmarks established during the great trigonometrical survey.

[Is static False. Containment is Not Specified.]

◆ other : Public

-- Name --

other

-- Definition --

control type which is not listed

[Is static False. Containment is Not Specified.]

◆ spotHeight : Public

ATTRIBUTES

-- Name --
spotHeight (Spot Height)

-- Definition --
represents height of spots.

[Is static False. Containment is Not Specified.]

◆ standardBenchmark : Public

-- Name --
Standard Benchmark (SBM)

-- Definition --

it is a ground planed monument built for stability to minimized the probability of disturbance. The SBM are established within the precise leveling network to provide a stable benchmark system that will control the leveling network.

[Is static False. Containment is Not Specified.]

◆ traverseStation : Public

-- Name --
traverseStation (Traverse Station)

-- Definition --

a geodetic point whose position on the earth's surface within a given system of coordinates is determined by the method of traversing. It may be stabilized by a large concrete monument set into the ground or by a geodetic beacon erected on the surface.

[Is static False. Containment is Not Specified.]

◆ trigonometricIP : Public

-- Name --
trigonometricIP

-- Definition --

represents trigonometric intersected point

[Is static False. Containment is Not Specified.]

◆ trigonometricStation : Public

-- Name --
trigonometricStation (trig station)

-- Definition --

is a fixed surveying station with known coordinates, established through trigonometric instruments and methods.

[Is static False. Containment is Not Specified.]

Control_Point

Class «featureType» in package 'Cadastral_Schema_Model'

-- Name --
Control_Point

-- Definition --

represents vertical and horizontal control points. Control points are used for the basis of the topographic survey measurements

Control_Point

Version 1.0 Phase 1.0 Proposed

ATTRIBUTES

◆ controlPoint_ID : CharacterString Public

-- Name --

controlPoint_ID (control Point ID)

-- Definition --

control Point ID represents the unique identification of the control point feature.

[Is static False. Containment is Not Specified.]

◆ elevation : Real Public

-- Name --

elevation

-- Definition --

represents the elevation of the control

[Is static False. Containment is Not Specified.]

◆ geom : GM_Point Public

-- Name --

geom: (geometry)

-- Definition --

represents geometry of spatial object to be represented

[Is static False. Containment is Not Specified.]

◆ name : CharacterString Public

-- Name --

name

-- Definition --

Represents the name of the topographic feature

[Is static False. Containment is Not Specified.]

◆ remarks : CharacterString Public

-- Name --

remarks

-- Definition --

Represents any additional remarks (if any)

[Is static False. Containment is Not Specified.]

◆ type : ControlType Public

-- Name --

type

ATTRIBUTES

-- Definition --

represents the specific type of control feature.

[Is static False. Containment is Not Specified.]

Crossing

Class «codeList» in package 'Cadastral_Schema_Model'

-- Name --

Crossing

-- Definition --

represents the possible values of crossing feature type.

Crossing

Version 1.0 Phase 1.0 Proposed

ATTRIBUTES

◆ ford : Public

-- Name --

ford

-- Definition --

a shallow place in a river or stream allowing one to walk or drive across.

[Is static False. Containment is Not Specified.]

◆ levelCrossing : Public

-- Name --

levelCrossing (Level Crossing)

-- Definition --

a place where a railway and a road, or two railway lines, cross at the same level.

[Is static False. Containment is Not Specified.]

◆ other : Public

-- Name --

other

-- Definition --

represent such types which are not included in the list

[Is static False. Containment is Not Specified.]

◆ siphonIntermittent : Public

-- Name --

siphonIntermittent (Siphon Intermittent)

-- Definition --

a pipe or tube in the form of an upside-down U, filled with water and arranged so that the pressure of the atmosphere forces water to flow upward from a container through the tube, over a barrier, and into a lower container.

ATTRIBUTES	
	[Is static False. Containment is Not Specified.]
◆ siphonPerennial : Public	
-- Name --	
siphonPerennial (Siphon Perennial)	
-- Definition --	
a pipe or tube in the form of an upside-down U, filled with perennial water and arranged so that the pressure of the atmosphere forces perennial water to flow upward from a container through the tube, over a barrier, and into a lower container.	
	[Is static False. Containment is Not Specified.]

EducationalFacility

Class «codeList» in package 'Cadastral_Schema_Model'

-- Name --
Educational Facility

-- Definition --
represents the possible values of educational facility

EducationalFacility
Version 1.0 Phase 1.0 Proposed

ATTRIBUTES	
◆ college : Public	
-- Name --	
college	
-- Definition --	
an establishment for learning at post-secondary level	[Is static False. Containment is Not Specified.]
◆ institute : Public	
-- Name --	
institute	
-- Definition --	
a building in which work of a literary, scientific or educational character is carried out.	[Is static False. Containment is Not Specified.]
◆ other : Public	
-- Name --	
other	
-- Definition --	
represent such types which are not included in the list	[Is static False. Containment is Not Specified.]

ATTRIBUTES

◆ school : Public

-- Name --

school

-- Definition --

an establishment for primary or secondary education

[Is static False. Containment is Not Specified.]

◆ technicalCollege : Public

-- Name --

technicalCollege (Technical College)

-- Definition --

an establishment for learning technical education at post-secondary level

[Is static False. Containment is Not Specified.]

◆ university : Public

-- Name --

university

-- Definition --

a tertiary educational institution with the power to award postgraduate research degrees.

[Is static False. Containment is Not Specified.]

ForestCategoryV

Class «codeList» in package 'Cadastral_Schema_Model'

-- Name --

Forest Category Value

-- Definition --

represents possible category values of forest

ForestCategoryV

Version 1.0 Phase 1.0 Proposed

ATTRIBUTES

◆ community_Forest : Public

-- Name --

community_Forest

-- Definition --

National forests that have been entrusted to user groups (as defined in clause 25 of the act) for development, conservation and utilization in the interest of the community.

[Is static False. Containment is Not Specified.]

◆ government-Managed : Public

ATTRIBUTES

-- Name --

Government-Managed

-- Definition --

National forests managed by the government.

[Is static False. Containment is Not Specified.]

◆ guzaraCumResume : Public

-- Name --

Guzara Cum Resume forest

-- Definition --

land has been given to locals as a result of land reforms or or evictee property and have not yet been classified for the purpose provide the daily needs for a locality to sustain themselves

[Is static False. Containment is Not Specified.]

◆ guzaraForest : Public

-- Name --

Guzara Forest

-- Definition --

Forests on communal land that has not been divided and is meant for collective use to satisfy the requirements of all the village community are known as Guzara forests.

[Is static False. Containment is Not Specified.]

◆ leasehold_Forest : Public

-- Name --

leasehold_Forest

-- Definition --

National forests that have been leased (according to clause 32 of the act) for specified purpose(s) to a legally defined institution, forest-based industry or community.

[Is static False. Containment is Not Specified.]

◆ national_Forest : Public

-- Name --

National_Forest

-- Definition --

All forests other than private forest, regardless of the demarcation of their boundaries and including cultivated or uncultivated land, roads, ponds, lakes, rivers, streams and the shingly land that is surrounded by or in the vicinity of a forest.

[Is static False. Containment is Not Specified.]

◆ other : Public

-- Name --

other

-- Definition --

forest category which is not given in a list

[Is static False. Containment is Not Specified.]

ATTRIBUTES

◆ private_Forest : Public

-- Name --

private_Forest

-- Definition --

The planted or protected forests on land that belongs to an individual as per the prevailing law.

[Is static False. Containment is Not Specified.]

◆ protected_Forest : Public

-- Name --

protected_Forest

-- Definition --

National forests that the government has declared protected in consideration of their environmental, scientific and cultural importance.

[Is static False. Containment is Not Specified.]

◆ rangeland_Forest : Public

-- Name --

Rangeland Forest

-- Definition --

lands on which the native plants cover are predominantly grass-like plants, forbs, or shrubs suitable for grazing

[Is static False. Containment is Not Specified.]

◆ religious_Forest : Public

-- Name --

religious_Forest

-- Definition --

National forests that have been entrusted to any religious entity, group or community as specified in clause 35 of the act.

[Is static False. Containment is Not Specified.]

◆ resumed_Land : Public

-- Name --

resumed_Land

-- Definition --

Resumed lands have been given to PFD as a result of land reforms or evacuee property and have not yet been classified.

[Is static False. Containment is Not Specified.]

◆ section38 : Public

-- Name --

section38

-- Definition --

ATTRIBUTES

Section 38 forests are privately owned lands that have been voluntarily and temporarily put under the control of PFD for the conservation and preservation of soil and vegetation. These are notified under section 38 of the 1927 Forest Act on the written request of the individual owner or of a two-thirds majority of the owners in cases of joint property, for periods of 25 or 30 years.

[Is static False. Containment is Not Specified.]

◆ unclassed_Forest : Public

-- Name --

Unclassed_Forest

-- Definition --

are areas that have been transferred to forest department pending final legal classification.

[Is static False. Containment is Not Specified.]

ForestTable

Class «featureType» in package 'Cadastral_Schema_Model'

-- Name --

TaxTable

-- Definition --

Represents tax to be collected from formers

ForestTable

Version 1.0 Phase 1.0 Proposed

ATTRIBUTES

◆ compartment_Name : CharacterString Public

-- Name --

compartment_Name

-- Definition --

A permanent, geographically recognisable unit of forest land forming the basis of prescription and permanent record of all forest operations.

[Is static False. Containment is Not Specified.]

◆ forest_Category : ForestCategoryV Public

-- Name --

Legal_Status

-- Definition --

represents legal status of the forest

[Is static False. Containment is Not Specified.]

◆ forest_Name : CharacterString Public

-- Name --

Forest Name

ATTRIBUTES

-- Definition --

it represents forest name

[Is static False. Containment is Not Specified.]

◆ forest_Type : ForestTypeV Public

-- Name --

Forest Type

-- Definition --

it represents the forest types

[Is static False. Containment is Not Specified.]

◆ forest_Zone : CharacterString Public

-- Name --

Forest_Zone

-- Definition --

Forest areas are used to identify the dominant values of certain forest areas and their management.

[Is static False. Containment is Not Specified.]

◆ from_Date : DateTime Public

-- Name --

from

-- Definition --

represents the date from which forest exist.

[Stereotype is «voidable». Is static False. Containment is Not Specified.]

◆ notification : CharacterString Public

-- Name --

notification

-- Definition --

represents forest notifications

[Is static False. Containment is Not Specified.]

◆ parcel_ID : CharacterString Public

-- Name --

Parcel_ID

-- Definition --

represents the unique id of a parcel in the Pakistan.

[Is static False. Containment is Not Specified.]

◆ remarks : CharacterString Public

-- Name --

remarks

-- Definition --

Represents any additional remarks

ATTRIBUTES

[Is static False. Containment is Not Specified.]

◆ source_Document : CharacterString Public

-- Name --

source_Document

-- Definition --

Represents all materials used to extract information.

[Is static False. Containment is Not Specified.]

◆ source_Imagery : CharacterString Public

-- Name --

source_Imagery

-- Definition --

is a source imagery used to identify forests.

[Is static False. Containment is Not Specified.]

◆ source_Map : CharacterString Public

-- Name --

source_Map

-- Definition --

is a source map used for forests digitization.

[Is static False. Containment is Not Specified.]

◆ sub_Compartment : CharacterString Public

-- Name --

sub_Compartment

-- Definition --

A sub-division of a compartment, sometimes temporary, where because of particular characteristics an area of forest has a special description and requires separate silvicultural treatment.

[Is static False. Containment is Not Specified.]

◆ territory_ID : CharacterString Public

-- Name --

territory_ID

-- Definition --

represents the unique id of a territory in the Pakistan.

[Is static False. Containment is Not Specified.]

◆ to_Date : DateTime Public

-- Name --

To Date

-- Definition --

represents the date at which the forest breaks down.

[Stereotype is «voidable». Is static False. Containment is Not Specified.]

ATTRIBUTES

◆ working_Circle : CharacterString Public

-- Name --

Working Circle

-- Definition --

One or more parts of a working plan area, not necessarily adjoining, having the same objectives, silvicultural system and prescriptions.

[Is static False. Containment is Not Specified.]

◆ working_Plan : CharacterString Public

-- Name --

working_Plan

-- Definition --

A document that regulates wood production, silviculture and tending activities for a specific period of time through the application of prescriptions specifying targets, action and control arrangements. A Working Plan is not synonymous with a Forest Management Plan.

[Is static False. Containment is Not Specified.]

ForestTypeV
Version 1.0 Phase 1.0 Proposed

ATTRIBUTES

◆ coniferous : Public

-- Name --

Coniferous

ATTRIBUTES

-- Definition --

trees composed primarily of cone bearing needle leaved evergreen trees found in moderate to high precipitation areas

[Is static False. Containment is Not Specified.]

◆ deciduousForest : Public

-- Name --

Deciduous Forest

-- Definition --

These are forests of low or moderate height consisting almost entirely of deciduous species. Their canopy is typically light though it may appear fairly dense and complete during the short rainy season.

[Is static False. Containment is Not Specified.]

◆ desert_Forest : Public

-- Name --

Desert_Forest

-- Definition --

A forest which consist of thorny and bushes natural vegetation, such forest are found in regions with less than 70cm of rainfall

[Is static False. Containment is Not Specified.]

◆ irrigated_Plantation : Public

-- Name --

Irrigated Plantation

-- Definition --

These are man-made forests and are in the shape of blocks of tree plantations in the canal irrigated tract.

[Is static False. Containment is Not Specified.]

◆ naturalForest : Public

-- Name --

Natural Forest

-- Definition --

a forest which is not planted and exist in nature

[Is static False. Containment is Not Specified.]

◆ other : Public

-- Name --

other

-- Definition --

forest type which is not given in a list

[Is static False. Containment is Not Specified.]

◆ riverainForest : Public

-- Name --

ATTRIBUTES
Riverain Forest
-- Definition -- Riverine forest is located adjacent to the rivers and their major tributaries, and is generally denser and has bigger trees than the savanna. [Is static False. Containment is Not Specified.]
◆ roadSidePlantation : Public
-- Name -- Road Side Plantation
-- Definition -- tree cover along road [Is static False. Containment is Not Specified.]
◆ scrubForest : Public
-- Name -- Scrub Forests
-- Definition -- consist of open woodland with thorny trees with short trunks and low, branching crowns; spiny and xerophytic shrubs; and dry grassland. [Is static False. Containment is Not Specified.]
◆ swampForest : Public
-- Name -- Swamp Forests
-- Definition -- These are more or less gregarious forests of low height which occur in the Arabian sea around the coast of Karachi and Pasni in Balochistan. The main species is Avicennia marina (99%). Other species like Rhizophora have disappeared over a period of time due to heavy cutting. According to latest estimates, these forest cover an area of 207,000 ha [Is static False. Containment is Not Specified.]

GenderV

Class «codeList» in package 'Cadastral_Schema_Model'

-- Name --
GenderV

-- Definition --
represents the whether the person is male , female or transgender

GenderV
Version 1.0 Phase 1.0 Proposed

ATTRIBUTES
◆ female : Public
-- Name --

ATTRIBUTES
<p>urban</p> <p>-- Definition -- represents female gender</p> <p>[Is static False. Containment is Not Specified.]</p>
<p>◆ male : Public</p> <p>-- Name -- male</p> <p>-- Definition -- represents male gender</p> <p>[Is static False. Containment is Not Specified.]</p>
<p>◆ transgender : Public</p> <p>-- Name -- transgender</p> <p>-- Definition -- Transgender people are people whose gender identity is different from the gender they were thought to be at birth. “Trans” is often used as shorthand for transgender</p> <p>[Is static False. Containment is Not Specified.]</p>

GroundWater

Class «codeList» in package 'Cadastral_Schema_Model'

-- Name --
Ground Water

-- Definition --
groundwater is the water found underground in the cracks and spaces in soil, sand and rock.

GroundWater
Version 1.0 Phase 1.0 Proposed

ATTRIBUTES
<p>◆ borewell : Public</p> <p>-- Name -- borewell (Bore Well)</p> <p>-- Definition -- A deep vertical hole of a small diameter drilled to obtain water.</p> <p>[Is static False. Containment is Not Specified.]</p>
<p>◆ handpump : Public</p> <p>-- Name -- handpump (Hand Pump)</p>

ATTRIBUTES

-- Definition --

water pump operated by hand

[Is static False. Containment is Not Specified.]

◆ hotspring : Public

-- Name --

hotspring (Hot Spring)

-- Definition --

A naturally heated mineral spring.

[Is static False. Containment is Not Specified.]

◆ other : Public

-- Name --

other

-- Definition --

represent such types which are not included in the list

[Is static False. Containment is Not Specified.]

◆ overheadWaterTank : Public

-- Name --

overheadWaterTank (Overhead Water Tank)

-- Definition --

an overhead tank for holding water.

[Is static False. Containment is Not Specified.]

◆ spring : Public

-- Name --

spring

-- Definition --

A place at which a flow of water issues naturally from the ground, either continuously or intermittently.

[Is static False. Containment is Not Specified.]

◆ tubeWell : Public

-- Name --

tubeWell (Tube Well)

-- Definition --

A tube well is a type of water well in which a long 100–200 millimetres wide stainless steel tube or pipe is bored into an underground aquifer.

[Is static False. Containment is Not Specified.]

◆ well_in_Rock : Public

-- Name --

well_in_Rock

ATTRIBUTES

-- Definition --

represents a well which is located in rock

[Is static False. Containment is Not Specified.]

◆ wellLined : Public

-- Name --

wellLined (Well Lined)

-- Definition --

an excavation or structure created in the ground by digging, driving, boring, or drilling to access groundwater in underground aquifers. The well water is drawn by a pump, or using containers, such as buckets, that are raised mechanically or by hand.

[Is static False. Containment is Not Specified.]

◆ wellUnlined : Public

-- Name --

wellUnlined (Well Unlined)

-- Definition --

a coarse well, which is not properly lined

[Is static False. Containment is Not Specified.]

Historical

Class «codeList» in package 'Cadastral_Schema_Model'

-- Name --

Historical

-- Definition --

represents possible values of historical features

Historical

Version 1.0 Phase 1.0 Proposed

ATTRIBUTES

◆ historicalReconstruction : Public

-- Name --

historicalReconstruction (Historical Reconstruction)

-- Definition --

an area or precinct which was at one time an area with recognized name and purpose and which has now been redeveloped to recognize its past.

[Is static False. Containment is Not Specified.]

◆ historicSite : Public

-- Name --

historicSite (Historic Site)

-- Definition --

ATTRIBUTES

a specific place or site which has at one time been the site of an event or activity which is remembered.

[Is static False. Containment is Not Specified.]

◆ monument : Public

-- Name --

monument

-- Definition --

an obelisk, statue or building erected to commemorate a person or event.

[Is static False. Containment is Not Specified.]

◆ museum : Public

-- Name --

museum

-- Definition --

a building for keeping and exhibiting objects of historical, scientific or artistic interest.

[Is static False. Containment is Not Specified.]

◆ other : Public

-- Name --

other

-- Definition --

represent such types which are not included in the list

[Is static False. Containment is Not Specified.]

◆ ruin : Public

-- Name --

ruin

-- Definition --

a fallen and derelict building.

[Is static False. Containment is Not Specified.]

◆ shrine : Public

-- Name --

shrine

-- Definition --

a place or site venerated for its association with a famous person or event.

[Is static False. Containment is Not Specified.]

IndustrialArea

Class «codeList» in package 'Cadastral_Schema_Model'

-- Name --

Industrial Area

-- Definition --

Represents the possible values of the industry types.

IndustrialArea
Version 1.0 Phase 1.0 Proposed

ATTRIBUTES

◆ chimney : Public

-- Name --
chimney

-- Definition --
represents factory chimney.

[Is static False. Containment is Not Specified.]

◆ factory : Public

-- Name --
factory

-- Definition --
a building or group of buildings where goods are manufactured or assembled chiefly by machine.

[Is static False. Containment is Not Specified.]

◆ kiln : Public

-- Name --
kiln

-- Definition --
a construction in which bricks are baked or burned.

[Is static False. Containment is Not Specified.]

◆ mill : Public

-- Name --
mill

-- Definition --
a place where some grinding work is taking place such as a flour mill or rice mill.

[Is static False. Containment is Not Specified.]

◆ other : Public

-- Name --
other

-- Definition --
represent such types which are not included in the list

[Is static False. Containment is Not Specified.]

ATTRIBUTES

◆ sawmill : Public

-- Name --

sawmill

-- Definition --

a facility where logs are cut into lumber.

[Is static False. Containment is Not Specified.]

◆ steelMill : Public

-- Name --

steelMill (Steel Mill)

-- Definition --

an industrial plant for the manufacture of steel. It may be an integrated steel works carrying out all steps of steel making from smelting iron ore to rolled product, but may also describe plants where steel semi-finished casting products (blooms, ingots, slabs, billets) are made, from molten pig iron or from scrap.

[Is static False. Containment is Not Specified.]

◆ tannery : Public

-- Name --

tannery

-- Definition --

a place where the skins are processed. Tanning hide into leather involves a process which permanently alters the protein structure of skin, making it more durable and less susceptible to decomposition, and also possibly coloring it.

[Is static False. Containment is Not Specified.]

IntiqalType

Class «codeList» in package 'Cadastral_Schema_Model'

-- Name --

IntiqalType

-- Definition --

represents type of intiqal/ mutation

IntiqalType

Version 1.0 Phase 1.0 Proposed

ATTRIBUTES

◆ bai : Public

-- Name --

bai

-- Definition --

Whenever a person sells his land either completely or partially, to another person, this type of mutation is known as Bai or Sale.

[Is static False. Containment is Not Specified.]

◆ government_Allotted : Public

ATTRIBUTES

-- Name --
government_Allotted

-- Definition --
the land allotted by the government

[Is static False. Containment is Not Specified.]

◆ hibba : Public

-- Name --

hibba

-- Definition --

A Gift, Present. Whenever a part of complete land is gifted to some person, the mutation is called Hibba or Gift.

[Is static False. Containment is Not Specified.]

◆ other : Public

-- Name --

other

-- Definition --

Type which is not listed

[Is static False. Containment is Not Specified.]

◆ vasiyat : Public

-- Name --

vasiyat

-- Definition --

transfer of land through will(testament)

[Is static False. Containment is Not Specified.]

◆ wirasat : Public

-- Name --

wirasat

-- Definition --

the inherited land

[Is static False. Containment is Not Specified.]

KhatuniTable

Class «featureType» in package 'Cadastral_Schema_Model'

-- Name --
TaxTable

-- Definition --
Represents tax to be collected from formers

KhatuniTable
Version 1.0 Phase 1.0 Proposed

ATTRIBUTES

◆ from_Date : DateTime Public

-- Name --

from

-- Definition --

represents the date from which tax due.

[Stereotype is «voidable». Is static False. Containment is Not Specified.]

◆ parcel_ID : CharacterString Public

-- Name --

Parcel_ID

-- Definition --

represents the unique id of a parcel in the Pakistan.

[Is static False. Containment is Not Specified.]

◆ person_ID : CharacterString Public

-- Name --

person_ID (Personal ID)

-- Definition --

represents the NIC number/ form B number.

[Is static False. Containment is Not Specified.]

◆ remarks : CharacterString Public

-- Name --

remarks

-- Definition --

Represents any additional remarks

[Is static False. Containment is Not Specified.]

◆ territory_ID : CharacterString Public

-- Name --

territory_ID

-- Definition --

represents the unique id of a territory in the Pakistan.

[Is static False. Containment is Not Specified.]

◆ to_Date : DateTime Public

-- Name --

to

-- Definition --

represents the date up to which tax due.

[Stereotype is «voidable». Is static False. Containment is Not Specified.]

Medical Facility

-- Definition --
represents possible values of medical facility.

MedicalFacility
Version 1.0 Phase 1.0 Proposed

ATTRIBUTES	
◆ basicHealthUnit : Public	

ATTRIBUTES

-- Name --

Basic Health Unit

-- Definition --

It is the first level of health care considered to be necessary to maintain adequate health and protection from disease.

[Is static False. Containment is Not Specified.]

◆ bloodBank : Public

-- Name --

Blood Bank

-- Definition --

a place where supplies of blood or plasma for transfusion are stored.

[Is static False. Containment is Not Specified.]

◆ clinic : Public

-- Name --

clinic

-- Definition --

an establishment or hospital department where outpatients are given medical treatment or advice, especially of a specialist nature

[Is static False. Containment is Not Specified.]

◆ dispensary : Public

-- Name --

dispensary

-- Definition --

a room where medicines are prepared and provided.

[Is static False. Containment is Not Specified.]

◆ hospital : Public

-- Name --

hospital

-- Definition --

an institution providing medical and surgical treatment and nursing care for sick or injured people.

[Is static False. Containment is Not Specified.]

◆ laboratory : Public

-- Name --

laboratory

-- Definition --

a room or building equipped for scientific experiments, research, or teaching, or for the manufacture of drugs or chemicals.

[Is static False. Containment is Not Specified.]

◆ medicalStore : Public

-- Name --

medicalStore

-- Definition --

ATTRIBUTES

is a retail shop which provides pharmaceutical drugs

[Is static False. Containment is Not Specified.]

◆ other : Public

-- Name --

other

-- Definition --

represent such types which are not included in the list

[Is static False. Containment is Not Specified.]

◆ psychiatricHospital : Public

-- Name --

psychiatricHospital (Psychiatric Hospital)

-- Definition --

a hospital for the care and treatment of patients affected with acute or chronic mental illness

[Is static False. Containment is Not Specified.]

◆ ruralHealthCenter : Public

-- Name --

ruralHealthCenter (Rural Health Center)

-- Definition --

is a clinic located in a rural, medically under-served area

[Is static False. Containment is Not Specified.]

◆ sanatorium : Public

-- Name --

sanatorium

-- Definition --

an establishment for the medical treatment of people who are convalescing or have a chronic illness.

[Is static False. Containment is Not Specified.]

◆ veterinaryHospital : Public

-- Name --

veterinaryHospital (Veterinary Hospital)

-- Definition --

of or relating to veterinary medicine; concerned or connected with the medical or surgical treatment of animals, especially domestic animals.

[Is static False. Containment is Not Specified.]

MineCavePass

Class «featureType» in package 'Cadastral_Schema_Model'

-- Name --

MineCavePass (Mine, Cave and Pass)

-- Definition --

represents the possible values of mines,caves, pass features.

MineCavePass

Version 1.0 Phase 1.0 Proposed

ATTRIBUTES

◆ caveInhabited : Public

-- Name --

caveInhabited (Cave Inhabited)

-- Definition --

a cave where human or animal are living

[Is static False. Containment is Not Specified.]

◆ caveUninhabited : Public

-- Name --

caveUninhabited (Cave Uninhabited)

-- Definition --

a cave where no one is living

[Is static False. Containment is Not Specified.]

◆ mine : Public

-- Name --

mine

-- Definition --

a hole or tunnel dug into the earth from which ore or minerals are extracted.

[Is static False. Containment is Not Specified.]

◆ other : Public

-- Name --

other

-- Definition --

represent such types which are not included in the list

[Is static False. Containment is Not Specified.]

◆ pass : Public

-- Name --

pass

-- Definition --

A route through a mountain range or over a ridge.

[Is static False. Containment is Not Specified.]

◆ shaft : Public

ATTRIBUTES

-- Name --

shaft

-- Definition --

a vertical hole serving as access to a mine or other underground workings

[Is static False. Containment is Not Specified.]

NaturalVegetation

Class «codeList» in package 'Cadastral_Schema_Model'

-- Name --

NaturalVegetation (Natural Vegetation)

-- Definition --

Represents the possible values of the natural vegetation.

NaturalVegetation

Version 1.0 Phase 1.0 Proposed

ATTRIBUTES

◆ aloesBushes : Public

-- Name --

aloesBushes (Aloes Bushes)

-- Definition --

A tract of country, which bears a dense growth of aloes bushes

[Is static False. Containment is Not Specified.]

◆ bushes : Public

-- Name --

bushes

-- Definition --

a tract of country, not large in extent, which is uncultivated and covered with bushes or trees.

[Is static False. Containment is Not Specified.]

◆ heath : Public

-- Name --

heath

-- Definition --

an area of open uncultivated land, typically on acid sandy soil, with characteristic vegetation of heather, gorse, and coarse grasses.

[Is static False. Containment is Not Specified.]

◆ meadow : Public

-- Name --

ATTRIBUTES
meadow
-- Definition -- a piece of grassland, especially one used for hay.
[Is static False. Containment is Not Specified.]
other : Public
-- Name -- other
-- Definition -- represent such types which are not included in the list
[Is static False. Containment is Not Specified.]
reed : Public
-- Name -- reed
-- Definition -- reed is a common name for several tall, grass-like plants of wetlands.
[Is static False. Containment is Not Specified.]

OwnershipType

Class «codeList» in package 'Cadastral_Schema_Model'

-- Name --
OwnershipType

-- Definition --
represents the ownerships type e.g., state owned, individual , or shamilat-e-deh

OwnershipType
Version 1.0 Phase 1.0 Proposed

ATTRIBUTES
other : Public
-- Name -- other
-- Definition -- ownership type which is not listed
[Is static False. Containment is Not Specified.]
patti : Public
-- Name -- patti
-- Definition -- land used for specific community of villagers based on clans, caste, sect, area etc.
[Is static False. Containment is Not Specified.]

ATTRIBUTES

◆ private : Public

-- Name --

private

-- Definition --

parcel owned by the country citizen

[Is static False. Containment is Not Specified.]

◆ shamilat-e-Deh : Public

-- Name --

shamilat-e-Deh

-- Definition --

land in a village held for the common purposes of the village, i.e. graveyards, grazing grounds, community buildings, places of worship, schools, dispensaries, playgrounds, wells etc.

[Is static False. Containment is Not Specified.]

◆ state : Public

-- Name --

state

-- Definition --

state owned parcel

[Is static False. Containment is Not Specified.]

◆ taraf : Public

-- Name --

taraf

-- Definition --

land used for specific community of villagers based on clans, caste, sect, area etc.

[Is static False. Containment is Not Specified.]

Parcel

Class «featureType» in package 'Cadastral_Schema_Model'

-- Name --

Parcel

-- Definition --

Represents a parcel/ khasra of a village of the Pakistan

Parcel

Version 1.0 Phase 1.0 Proposed
created on 7/27/2019. Last modified 5/5/2021

ATTRIBUTES

◆ dimension : CharacterString Public

ATTRIBUTES

-- Name --
dimension

-- Definition --
represents dimension of the khasra

[Is static False. Containment is Not Specified.]

◆ effective_from : DateTime Public

-- Name --
effective_from

-- Definition --
Official date and time the cadastral parcel was/will be legally established.

-- Description --

NOTE This is the date and time the national cadastral reference can be used in legal acts.

[Is static False. Containment is Not Specified.]

◆ effective_to : DateTime Public

-- Name --
effective_to

-- Definition --
Date and time at which the cadastral parcel legally ceased/will cease to be used.

-- Description --

NOTE This is the date and time the national cadastral reference can no longer be used in legal acts.

[Is static False. Containment is Not Specified.]

◆ feet_per_Marla : Real Public

-- Name --
feet_per_Marla

-- Definition --

This field is used to Enter total Feet in a Marla. Different Feet/Marla are being used in Districts of Punjab like 225, 272, 272.25 and 270. Area calculation of a Mauza based on this selection.

[Is static False. Containment is Not Specified.]

◆ geom : GM_Polygon Public

-- Name --
geom (Geometry)

-- Definition --

represents the geometry of the parcel.

[Is static False. Containment is Not Specified.]

◆ khasra : CharacterString Public

-- Name --
khasra

-- Definition --

ATTRIBUTES

represents the unique khasra number in the village.

[Is static False. Containment is Not Specified.]

◆ mussavi_No : CharacterString Public

-- Name --

mussavi_No

-- Definition --

Represents the unique mussavi number of mussavi map

[Stereotype is «voidable». Is static False. Containment is Not Specified.]

◆ parcel_ID : CharacterString Public

-- Name --

Parcel_ID

-- Definition --

represents the unique id of a parcel in the Pakistan.

[Is static False. Containment is Not Specified.]

◆ remarks : CharacterString Public

-- Name --

remarks

-- Definition --

Represents any additional remarks (if any)

[Is static False. Containment is Not Specified.]

◆ squareNo : CharacterString Public

-- Name --

squareNo

-- Definition --

represents the unique square number in the village.

[Is static False. Containment is Not Specified.]

◆ sub_khasra : CharacterString Public

-- Name --

sub_khasra

-- Definition --

represents the sub khasra number in the village.

[Is static False. Containment is Not Specified.]

◆ territory_ID : CharacterString Public

-- Name --

territory_ID

-- Definition --

represents the unique id of a territory in the Pakistan.

[Is static False. Containment is Not Specified.]

-- Name --

ATTRIBUTES

chhatri

-- Definition --

chhatis are elevated, dome-shaped pavilions used as an element in Pakistani architecture. They are widely used, in palaces, in forts, or to demarcate funerary sites.

[Is static False. Containment is Not Specified.]

◆ church : Public

-- Name --

church

-- Definition --

a building for Christian public worship

[Is static False. Containment is Not Specified.]

◆ grave : Public

-- Name --

grave

-- Definition --

a place of burial for a dead body, typically a hole dug in the ground and marked by a stone or mound.

[Is static False. Containment is Not Specified.]

◆ graveyard : Public

-- Name --

graveyard

-- Definition --

a large burial ground

[Is static False. Containment is Not Specified.]

◆ idgah : Public

-- Name --

idgah

-- Definition --

Eidgah or Idgah is the term used in south Asian Islamic culture for the open-air gathering place usually outside the city (or at the outskirts) to perform the Salat al Eid (Eid prayers) for Eid ul-Fitr and Eid al-Adha. It is usually a public place that isn't used as a mosque at other times of the year.

[Is static False. Containment is Not Specified.]

◆ janazaGah : Public

-- Name --

janazaGah

-- Definition --

an open or in a place built for The Funeral Prayer

[Is static False. Containment is Not Specified.]

ATTRIBUTES

◆ masjid : Public

-- Name --

masjid

-- Definition --

a Muslim place of worship.

[Is static False. Containment is Not Specified.]

◆ other : Public

-- Name --

other

-- Definition --

represent such types which are not included in the list

[Is static False. Containment is Not Specified.]

◆ pagoda : Public

-- Name --

pagoda

-- Definition --

a Hindu or Buddhist temple, typically in the form of a many-tiered tower.

[Is static False. Containment is Not Specified.]

◆ shrine : Public

-- Name --

shrine

-- Definition --

a place regarded as holy because of its associations with a divinity or a sacred person or relic, marked by a building or other construction.

[Is static False. Containment is Not Specified.]

◆ temple : Public

-- Name --

temple

-- Definition --

a building used for worship in some religions (e.g. Christianity)

[Is static False. Containment is Not Specified.]

◆ tomb : Public

-- Name --

tomb

-- Definition --

a monument to the memory of a dead person, erected over their burial place.

[Is static False. Containment is Not Specified.]

Reservoir

Class «codeList» in package 'Cadastral_Schema_Model'

-- Name --

Reservoir

-- Definition --

represents possible value of the reservoir features

Reservoir

Version 1.0 Phase 1.0 Proposed

ATTRIBUTES

◆ barrage : Public

-- Name --

barrage

-- Definition --

a structure built to constrain the limit of tidal influence in a river or estuary, or to retain water for irrigation purposes.

[Is static False. Containment is Not Specified.]

◆ dam : Public

-- Name --

dam

-- Definition --

a wall or barrier constructed of earth, masonry etc., to impound water.

[Is static False. Containment is Not Specified.]

◆ excavatedTank_Intermittent : Public

-- Name --

excavatedTank_Intermittent

-- Definition --

it represents non perennial excavated tank

[Is static False. Containment is Not Specified.]

◆ excavatedTank_Perennial : Public

-- Name --

excavatedTank_Perennial

-- Definition --

it represents perennial excavated tank

[Is static False. Containment is Not Specified.]

◆ excavatedTankPerennialBankH : Public

-- Name --

excavatedTankPerennialBankH

ATTRIBUTES

-- Definition --

it represents excavated perennial tank having high bank

[Is static False. Containment is Not Specified.]

◆ fishFarm : Public

-- Name --

fish Farm

-- Definition --

it represents fish farm

[Is static False. Containment is Not Specified.]

◆ levee : Public

-- Name --

levee

-- Definition --

an embankment built to confine a stream to its bed.

[Is static False. Containment is Not Specified.]

◆ ocean : Public

-- Name --

ocean

-- Definition --

a very large expanse of sea, in particular each of the main areas into which the sea is divided geographically.

[Is static False. Containment is Not Specified.]

◆ other : Public

-- Name --

other

-- Definition --

represent such types which are not included in the list

[Is static False. Containment is Not Specified.]

◆ pond_Intermittent : Public

-- Name --

pond_Intermittent (Pond Intermittent)

-- Definition --

a small body of still non perennial water in a natural hollow.

[Is static False. Containment is Not Specified.]

◆ pondPerennial : Public

-- Name --

pondPerennial (Pond Perennial)

-- Definition --

A small body of still perennial water in a natural hollow.

ATTRIBUTES	
	[Is static False. Containment is Not Specified.]
<p>◆ swimingPool : Public</p> <p>-- Name -- swimingPool (Swimng Pool)</p> <p>-- Definition -- an artificial pool for swimming in.</p>	[Is static False. Containment is Not Specified.]
<p>◆ tank_Intermittent : Public</p> <p>-- Name -- tank_Intermittent (Tank Intermittent)</p> <p>-- Definition -- a tank for holding non perennial water.</p>	[Is static False. Containment is Not Specified.]
<p>◆ tankPerennial : Public</p> <p>-- Name -- tankPerennial (Tank Perennial)</p> <p>-- Definition -- a tank for holding perennial water.</p>	[Is static False. Containment is Not Specified.]
<p>◆ weir : Public</p> <p>-- Name -- weir</p> <p>-- Definition -- a barrier erected across a stream to impound and raise the water level for the purpose of maintaining it at the level required for irrigation or navigation purposes.</p>	[Is static False. Containment is Not Specified.]

Residence

Class «codeList» in package 'Cadastral_Schema_Model'

-- Name --
Residence

-- Definition --
A residential area is a land used in which housing predominates, as opposed to industrial and commercial areas.

ATTRIBUTES

◆ apartment : Public

-- Name --

apartment

-- Definition --

a flat, typically one that is well appointed or used for holidays.

[Is static False. Containment is Not Specified.]

◆ bambooHouse : Public

-- Name --

BambooHouse

-- Definition --

a house made of wood

[Is static False. Containment is Not Specified.]

◆ bungalow : Public

-- Name --

bungalow

-- Definition --

bungalow is a large home used as a solitary family unit.

[Is static False. Containment is Not Specified.]

◆ cabin : Public

-- Name --

cabin

-- Definition --

a small wooden shelter or house in a wild or remote area

[Is static False. Containment is Not Specified.]

◆ circuitHouse : Public

-- Name --

Circuit house

-- Definition --

represent a circuit hous

[Is static False. Containment is Not Specified.]

◆ colony : Public

-- Name --

colony

-- Definition --

represents residential colony

[Is static False. Containment is Not Specified.]

◆ dakBungalow : Public

-- Name --

Dak Bungalow

ATTRIBUTES

-- Definition --

Dak Bungalow was a government building in British India under Company Rule and the Raj. The buildings provided free accommodation for government officials and, upon their permission, "incomparably cheap" lodging for other travelers. The structures are therefore sometimes also known as prostheses, restless, or travelers bungalows.

[Is static False. Containment is Not Specified.]

◆ desertedHut : Public

-- Name --

desertedHut (Deserted Hut)

-- Definition --

an abandoned hut

[Is static False. Containment is Not Specified.]

◆ diplomaticEnclave : Public

-- Name --

Diplomatic Enclave

-- Definition --

is a secure zone in Islamabad, Pakistan which contains diplomatic missions.

[Is static False. Containment is Not Specified.]

◆ flat : Public

-- Name --

flat

-- Definition --

flat is a self-contained housing unit that occupies only part of a building, generally on a single story

[Is static False. Containment is Not Specified.]

◆ greenBelt : Public

-- Name --

Green Belt

-- Definition --

A green belt is a land-use zone designation used in land-use planning to retain areas of largely undeveloped, wild, or agricultural land surrounding or neighboring urban areas.

[Is static False. Containment is Not Specified.]

◆ guardHouse : Public

-- Name --

guardHouse (Guard House)

-- Definition --

a building accommodating a guard who controls entrance to the grounds of a house, housing development, school, or other facility.

[Is static False. Containment is Not Specified.]

◆ hostel : Public

ATTRIBUTES

-- Name --

hostel

-- Definition --

an establishment which provides inexpensive food and lodging for a specific group of people, such as students, workers, or travellers

[Is static False. Containment is Not Specified.]

◆ house : Public

-- Name --

house

-- Definition --

a building for human habitation, especially one that consists of a ground floor and one or more upper storeys.

[Is static False. Containment is Not Specified.]

◆ hutTemporary : Public

-- Name --

hutTemporary (Hut Temporary)

-- Definition --

A hut is a primitive dwelling, which may be constructed of various local materials. Temporary hut is only used for temporary accommodation, usually located in wilderness areas,

[Is static False. Containment is Not Specified.]

◆ infrastructure : Public

-- Name --

infrastructure

-- Definition --

infrastructure. Public services and facilities like sewage-disposal systems, water-supply systems, other utility systems

[Is static False. Containment is Not Specified.]

◆ inspectionBungalow : Public

-- Name --

Inspection bungalow

-- Definition --

represent an Inspection bungalow

[Is static False. Containment is Not Specified.]

◆ kutchaHouse : Public

-- Name --

Kutcha House

-- Definition --

a house prepared of wood, straw, mud and dried out leaves. A hut is a kutcha house.

[Is static False. Containment is Not Specified.]

◆ lawn : Public

ATTRIBUTES

-- Name --

lawn

-- Definition --

represents lawn

[Is static False. Containment is Not Specified.]

◆ office : Public

-- Name --

office

-- Definition --

a room, set of rooms, or building used as a place for commercial, professional, or bureaucratic work.

[Is static False. Containment is Not Specified.]

◆ openArea : Public

-- Name --

open Area

-- Definition --

Open area means any lands excluding enclosed structures.

[Is static False. Containment is Not Specified.]

◆ openAreaAroundNala : Public

-- Name --

open Area

-- Definition --

Open area means any surrounding land around anala that does not have closed structures.

[Is static False. Containment is Not Specified.]

◆ other : Public

-- Name --

other

-- Definition --

represent such types which are not included in the list

[Is static False. Containment is Not Specified.]

◆ plaza : Public

-- Name --

plaza

-- Definition --

a public square, marketplace, or similar open space in a built-up area.

[Is static False. Containment is Not Specified.]

◆ plot : Public

-- Name --

plot

-- Definition --

plot is a tract or parcel of land owned or meant to be owned by some owner (s).

[Is static False. Containment is Not Specified.]

ATTRIBUTES

◆ quarter : Public

-- Name --

quarter

-- Definition --

A place for people to live, especially if they're in the military, can be called quarters

[Is static False. Containment is Not Specified.]

◆ restHouse : Public

-- Name --

Rest House

-- Definition --

a building used for shelter by travelers (especially in areas where there are no hotels).

[Is static False. Containment is Not Specified.]

◆ scatteredHuts : Public

-- Name --

scatteredHuts (Scattered Huts)

-- Definition --

huts scattered around the area

[Is static False. Containment is Not Specified.]

◆ shelter : Public

-- Name --

shelter

-- Definition --

a shelter is a basic architectural structure or building that provides protection from the local environment.

[Is static False. Containment is Not Specified.]

◆ travelerBungalow : Public

-- Name --

Traveler's bungalow

-- Definition --

represent a Traveler's bungalow

[Is static False. Containment is Not Specified.]

RiversCanalLakes

Class «codeList» in package 'Cadastral_Schema_Model'

-- Name --

RiversCanalLakes (Rivers, Canal and Lakes)

-- Definition --

represents possible values of rivers, canals and lakes

RiversCanalLakes
Version 1.0 Phase 1.0 Proposed

ATTRIBUTES

◆ canal_Intermittent : Public

-- Name --

canal_Intermittent (Canal Intermittent)

-- Definition --

Non-perennial canals, which only run in monsoon and summer, they get their water from the rains, e.g. Sutlej canal.

[Is static False. Containment is Not Specified.]

◆ canalDisused : Public

-- Name --

canalDisused (Canal Disused)

-- Definition --

canal which is not in use.

[Is static False. Containment is Not Specified.]

◆ canalPerennial : Public

-- Name --

canalPerennial (Canal Perennial)

-- Definition --

canal that ensure regular supply of water all the year around, e.g. chenab canal

[Is static False. Containment is Not Specified.]

◆ creek : Public

-- Name --

creek

-- Definition --

a natural watercourse, greater than a gully but of lesser size and length relative to a river and ultimately flowing into another creek or a river.

[Is static False. Containment is Not Specified.]

◆ drainIntermittent : Public

-- Name --

drainIntermittent (Drain Intermittent)

-- Definition --

an intermittent channel constructed so that water is drained or gradually carried away.

[Is static False. Containment is Not Specified.]

ATTRIBUTES

◆ drainPerennial : Public

-- Name --

drainPerennial (Drain Perennial)

-- Definition --

a perennial channel constructed so that water is drained or gradually carried away.

[Is static False. Containment is Not Specified.]

◆ lagoon : Public

-- Name --

lagoon

-- Definition --

a small body of open fresh water, smaller than a lake, possibly appearing only seasonally.

[Is static False. Containment is Not Specified.]

◆ lakeIntermittent : Public

-- Name --

lakeIntermittent (Lake Intermittent)

-- Definition --

some lakes can disappear seasonally. These are called intermittent lakes, ephemeral lakes, or seasonal lakes

[Is static False. Containment is Not Specified.]

◆ lakePerennial : Public

-- Name --

lakePerennial (Lake Perennial)

-- Definition --

a lake that retains water in its basin throughout the year and is not usually subject to extreme water-level fluctuations.

[Is static False. Containment is Not Specified.]

◆ other : Public

-- Name --

other

-- Definition --

represent such types which are not included in the list

[Is static False. Containment is Not Specified.]

◆ river : Public

-- Name --

river

-- Definition --

a major natural stream, usually perennial, in a large catchment basin, which carries water to another river, a lake or the sea.

[Is static False. Containment is Not Specified.]

◆ riverBank : Public

ATTRIBUTES

-- Name --

riverBank (River Bank)

-- Definition --

an area of low-lying ground adjacent to a river, formed mainly of river sediments and subject to flooding.

[Is static False. Containment is Not Specified.]

◆ riverFilling : Public

-- Name --

riverFilling (River Filling)

-- Definition --

river filing is sediments deposited in bottom.

[Is static False. Containment is Not Specified.]

◆ submergedRocks : Public

-- Name --

submergedRocks (Submerged Rocks)

-- Definition --

submerged rocks in the river or lake bed.

[Is static False. Containment is Not Specified.]

◆ submergedSand : Public

-- Name --

submergedSand (Submerged Sand)

-- Definition --

submerged sand in the river bed.

[Is static False. Containment is Not Specified.]

Road

Class «codeList» in package 'Cadastral_Schema_Model'

-- Name --

Road

-- Definition --

represents possible values of road

Road
Version 1.0 Phase 1.0 Proposed

ATTRIBUTES

◆ cart_Track : Public

-- Name --

cart_Track (Cart Track)

ATTRIBUTES

-- Definition --

a rough track or road over farmland that is unsuitable for ordinary vehicles.

[Is static False. Containment is Not Specified.]

◊ causeway : Public

-- Name --

causeway

-- Definition --

a raised road or track across low or wet ground.

[Is static False. Containment is Not Specified.]

◊ curb_Cut : Public

-- Name --

curb_Cut

-- Definition --

A ramp opening in a curb where vehicles or wheel chairs may enter or leave the roadway

[Is static False. Containment is Not Specified.]

◊ grandTrunkRoad : Public

-- Name --

Grand Trunk Road

-- Definition --

The Grand Trunk Road (commonly abbreviated to GT Road) is one of South Asia's oldest and longest major roads.

[Is static False. Containment is Not Specified.]

◊ jettyRoad : Public

-- Name --

jettyRoad (Jetty Road)

-- Definition --

represents road on jetty

[Is static False. Containment is Not Specified.]

◊ metalledRoad : Public

-- Name --

metalledRoad (Metalled Road)

-- Definition --

are made of bitumen or coal, cement or concrete

[Is static False. Containment is Not Specified.]

◊ metroRoute : Public

-- Name --

metroRoute (Metro Route)

-- Definition --

ATTRIBUTES

a dedicated route for metro bus system

[Is static False. Containment is Not Specified.]

❖ motorway : Public

-- Name --

motorway

-- Definition --

a fenced highway is known as motorway

[Is static False. Containment is Not Specified.]

❖ other : Public

-- Name --

other

-- Definition --

represent such types which are not included in the list

[Is static False. Containment is Not Specified.]

❖ packTrack : Public

-- Name --

packTrack (Pack Track)

-- Definition --

track formed by animal movements, especially in the mountain.

[Is static False. Containment is Not Specified.]

❖ serviceRoad : Public

-- Name --

serviceRoad

-- Definition --

represents service road

[Is static False. Containment is Not Specified.]

❖ shingledRoad : Public

-- Name --

shingledRoad (Shingled Road)

-- Definition --

a road formed by shingle (a mass of small rounded pebbles).

[Is static False. Containment is Not Specified.]

❖ specialRoad : Public

-- Name --

specialRoad (Special Road)

-- Definition --

a road dedicated to special purposes, e.g. taxi lane, bus lane, etc.

[Is static False. Containment is Not Specified.]

ATTRIBUTES
<p>◆ street : Public</p> <p>-- Name -- street</p> <p>-- Definition -- a public road in a city or town, typically with houses and buildings on one or both sides [Is static False. Containment is Not Specified.]</p>
<p>◆ superHighway : Public</p> <p>-- Name -- superHighway (Super Highway)</p> <p>-- Definition -- a highway especially planned for high speed traffic, usually having few if any intersections, limited points of access or exit, and a divider between lanes for traffic moving in opposite directions. [Is static False. Containment is Not Specified.]</p>
<p>◆ trackCoincidentWithStream : Public</p> <p>-- Name -- trackCoincidentWithStream (Track Coincident with Stream)</p> <p>-- Definition -- Represents track which is coincident with stream [Is static False. Containment is Not Specified.]</p>
<p>◆ unmetalledRoad : Public</p> <p>-- Name -- unmetalledRoad (Unmetalled Road)</p> <p>-- Definition -- not having a hard surface of road metal i.e. which is made in the absence of cement and concrete and sometimes made even of sand and laid as extended roads. [Is static False. Containment is Not Specified.]</p>

ShajraNasabTable

Class «featureType» in package 'Cadastral_Schema_Model'

-- Name --
ShajraNasabTab (Shajra Nasab Table)

-- Definition --
represents personal and family information of owners/ farmers

ATTRIBUTES

◆ alive : Boolean Public	
-- Name --	
alive	
-- Definition --	
represents whether the person is alive or dead	[Is static False. Containment is Not Specified.]
◆ casteName : CharacterString Public	
-- Name --	
casteName	
-- Definition --	
represent caste name like yousafzai, Nawab, etc	[Is static False. Containment is Not Specified.]
◆ contact_No : CharacterString Public	
-- Name --	
contact_No	
-- Definition --	
represents contact number of the person	[Is static False. Containment is Not Specified.]
◆ dep_Person_ID : CharacterString Public	
-- Name --	
Dependant Person ID	
-- Definition --	
the person ID on whom dependent	[Is static False. Containment is Not Specified.]
◆ family : CharacterString Public	
-- Name --	
family	
-- Definition --	
represents family of the owner/ farmer.	[Is static False. Containment is Not Specified.]
◆ father_ID : CharacterString Public	
-- Name --	
father_ID	
-- Definition --	
represents the father NIC number of the owner/ farmer.	[Is static False. Containment is Not Specified.]
◆ finger_Impression : BLOB Public	

ATTRIBUTES

-- Name --

finger_Impression

-- Definition --

represents finger impression of the person

[Is static False. Containment is Not Specified.]

◆ gender : GenderV Public

-- Name --

gender

-- Definition --

represents gender of the person

[Is static False. Containment is Not Specified.]

◆ husband_ID : CharacterString Public

-- Name --

husband_ID

-- Definition --

represents NIC number of the husband of owner/ farmer.

[Is static False. Containment is Not Specified.]

◆ mother_ID : CharacterString Public

-- Name --

mother_ID

-- Definition --

represents the mother National ID number

[Is static False. Containment is Not Specified.]

◆ person_ID : CharacterString Public

-- Name --

person_ID (Personal ID)

-- Definition --

represents the NIC number/ form B number.

[Is static False. Containment is Not Specified.]

◆ person_Name : CharacterString Public

-- Name --

person_Name

-- Definition --

represents the name of the owner/ farmer.

[Is static False. Containment is Not Specified.]

◆ profession : CharacterString Public

ATTRIBUTES

-- Name --
profession

-- Definition --
represents profession of the owner/ farmer.

[Is static False. Containment is Not Specified.]

◆ religion : CharacterString Public

-- Name --
religion

-- Definition --
represents religion of the owner/ farmer.

[Is static False. Containment is Not Specified.]

◆ remarks : CharacterString Public

-- Name --
remarks

-- Definition --
Represents any additional remarks (if any)

[Is static False. Containment is Not Specified.]

◆ sect : CharacterString Public

-- Name --
sect

-- Definition --
represents sect of the owner/ farmer.

[Is static False. Containment is Not Specified.]

◆ subCaste : CharacterString Public

-- Name --
subCaste

-- Definition --
represents sub caste name

[Is static False. Containment is Not Specified.]

Version 1.0 Phase 1.0 Proposed

ATTRIBUTES

◆ areaValue : Real Public

-- Name --

areaValue

-- Definition --

Recorded area value providing an area quantification.

[Stereotype is «voidable». Is static False. Containment is Not Specified.]

◆ parcel_ID : CharacterString Public

-- Name --

Parcel_ID

-- Definition --

represents the unique id of a parcel in the Pakistan.

[Is static False. Containment is Not Specified.]

◆ remarks : CharacterString Public

-- Name --

remarks

-- Definition --

Represents any additional remarks (if any)

[Is static False. Containment is Not Specified.]

◆ tax_Amount : Real Public

-- Name --

tax_Amount

-- Definition --

tax to be collected from owner

[Is static False. Containment is Not Specified.]

ATTRIBUTES

◆ taxPeriodTo : DateTime Public

-- Name --

taxPeriodTo

-- Definition --

represents the date up to which tax due.

[Stereotype is «voidable». Is static False. Containment is Not Specified.]

◆ taxRate : Real Public

-- Name --

taxRate

-- Definition --

represents tax rates at that specific period

[Is static False. Containment is Not Specified.]

◆ taxPeriodFrom : DateTime Public

-- Name --

taxPeriodFrom

-- Definition --

represents the date from which tax due.

[Stereotype is «voidable». Is static False. Containment is Not Specified.]

◆ territory_ID : CharacterString Public

-- Name --

territory_ID

-- Definition --

represents the unique id of a territory in the Pakistan.

[Is static False. Containment is Not Specified.]

«featureType»

TerritoryTable

Class «featureType» in package 'Cadastral_Schema_Model'

-- Name --
TerritoryTable

-- Definition --
represents an administrative area boundary

TerritoryTable
Version 1.0 Phase 1.0 Proposed

ATTRIBUTES

◆ cantonment : CharacterString Public

-- Name --
cantonment

-- Definition --
Represents an area of cantonment.

[Stereotype is «voidable». Is static False. Containment is Not Specified.]

◆ district : CharacterString Public

-- Name --
district

-- Definition --
Represents name of district.

[Is static False. Containment is Not Specified.]

◆ division : CharacterString Public

-- Name --
division

-- Definition --
Represents name of division.

[Is static False. Containment is Not Specified.]

◆ effective_from : DateTime Public

-- Name --
effective_from

-- Definition --
Official date and time the parcel zone was/will be legally established.

-- Description --
NOTE This is the date and time the parcel zone reference can be used in legal acts.

[Is static False. Containment is Not Specified.]

◆ effective_to : DateTime Public

-- Name --
effective_to

-- Definition --
Date and time at which the parcel zone legally ceased/will cease to be used.

-- Description --

ATTRIBUTES

NOTE This is the date and time the parcel zone reference can no longer be used in legal acts.

[Is static False. Containment is Not Specified.]

◆ hadbast : CharacterString Public

-- Name --

hadbast

-- Definition --

Hadbast number (it is the number of boundary of revenue village)

[Stereotype is «voidable». Is static False. Containment is Not Specified.]

◆ masterPlan : CharacterString Public

-- Name --

masterPlan

-- Definition --

Represents the master plan name like malir master plan

[Stereotype is «voidable». Is static False. Containment is Not Specified.]

◆ mauza : CharacterString Public

-- Name --

mauza

-- Definition --

Represents the mauza/ village name .

[Stereotype is «voidable». Is static False. Containment is Not Specified.]

◆ patwarCircle : CharacterString Public

-- Name --

patwarCircle

-- Definition --

Represents the patwar circle.

[Stereotype is «voidable». Is static False. Containment is Not Specified.]

◆ province : CharacterString Public

-- Name --

province

-- Definition --

Represents name of province.

[Is static False. Containment is Not Specified.]

◆ qanoongoHalqa : CharacterString Public

-- Name --

Qanoongo Halqa

-- Definition --

Represents the Qanoongo Halqa name.

[Stereotype is «voidable». Is static False. Containment is Not Specified.]

ATTRIBUTES
<p>◆ remarks : CharacterString Public</p> <p>-- Name -- remarks</p> <p>-- Definition -- Represents any additional remarks (if any)</p> <p style="text-align: right;">[Is static False. Containment is Not Specified.]</p>
<p>◆ subdivision : CharacterString Public</p> <p>-- Name -- subdivision</p> <p>-- Definition -- Represents name of subdivision.</p> <p style="text-align: right;">[Stereotype is «voidable». Is static False. Containment is Not Specified.]</p>
<p>◆ subTehsil : CharacterString Public</p> <p>-- Name -- subTehsil</p> <p>-- Definition -- Represents the subTehsil name.</p> <p style="text-align: right;">[Stereotype is «voidable». Is static False. Containment is Not Specified.]</p>
<p>◆ tehsil : CharacterString Public</p> <p>-- Name -- tehsil</p> <p>-- Definition -- Represents the tehsil name.</p> <p style="text-align: right;">[Is static False. Containment is Not Specified.]</p>
<p>◆ territory_ID : CharacterString Public</p> <p>-- Name -- territory_ID</p> <p>-- Definition -- represents the unique id of a territory in the Pakistan.</p> <p style="text-align: right;">[Is static False. Containment is Not Specified.]</p>
<p>◆ town : CharacterString Public</p> <p>-- Name -- town</p> <p>-- Definition -- Represents the town name.</p> <p style="text-align: right;">[Stereotype is «voidable». Is static False. Containment is Not Specified.]</p>

ATTRIBUTES

◆ unionCouncil : CharacterString Public

-- Name --

unionCouncil

-- Definition --

Represents the union Council name.

[Stereotype is «voidable». Is static False. Containment is Not Specified.]

◆ urban_Rural : Urban_RuralV Public

-- Name --

urban_Rural

-- Definition --

Represents an urban or rural region

[Is static False. Containment is Not Specified.]

Source: Public territory_ID (Class) Parcel «featureType»

Target: Public territory_ID (Class) TerritoryTable
«featureType»

TransmissionLine

Class «codeList» in package 'Cadastral_Schema_Model'

-- Name --

TransmissionLine (Transmission Line)

-- Definition --

represents possible values of transmission line

TransmissionLine

Version 1.0 Phase 1.0 Proposed

ATTRIBUTES

◆ electricPowerLine : Public

-- Name --

electricPowerLine (Electric Power Line)

-- Definition --

cable wires to transmit electric power from one place to other

[Is static False. Containment is Not Specified.]

◆ mainPowerTransmissionLine : Public

ATTRIBUTES

-- Name --

mainPowerTransmissionLine (Main Power Transmission Line)

-- Definition --

are used to carry electric power over relatively long distances from central generating station to the main station.

[Is static False. Containment is Not Specified.]

◆ other : Public

-- Name --

other

-- Definition --

represent such types which are not included in the list

[Is static False. Containment is Not Specified.]

◆ powerLineLocalDistribution : Public

-- Name --

powerLineLocalDistribution (Power Line Local Distribution)

-- Definition --

power line which is used for distribution of electric power locally.

[Is static False. Containment is Not Specified.]

◆ powerLineUnderConstruction : Public

-- Name --

powerlineUnderConstruction (Power Line Under Construction)

-- Definition --

power line which is under construction.

[Is static False. Containment is Not Specified.]

◆ powerLineUnderground : Public

-- Name --

powerlineUnderground (Power Line Underground)

-- Definition --

Power line which distributes electric power underground.

[Is static False. Containment is Not Specified.]

◆ telegraphLine : Public

-- Name --

telegraphLine (Telegraph Line)

-- Definition --

cable wires to transmit radio signals for providing telegraph services to subscribers.

[Is static False. Containment is Not Specified.]

ATTRIBUTES

◆ telephoneLine : Public

-- Name --

telephoneLine (Telephone Line)

-- Definition --

cable wires to transmit radio signals for providing telephone services to subscribers.

[Is static False. Containment is Not Specified.]

TreeCover

Class «codeList» in package 'Cadastral_Schema_Model'

-- Name --

TreeCover (Trees Cover)

-- Definition --

represents the possible values of tree cover features.

TreeCover

Version 1.0 Phase 1.0 Proposed

ATTRIBUTES

◆ bamboo : Public

-- Name --

bamboo

-- Definition --

A tract of country, which bears a dense growth of bamboo

[Is static False. Containment is Not Specified.]

◆ betelNut : Public

-- Name --

betelNut (Betel Nut)

-- Definition --

A tract of country, which bears a dense growth of betel nut.

[Is static False. Containment is Not Specified.]

◆ canebrake : Public

-- Name --

canebrake

-- Definition --

A tract of country, which bears a dense growth of canebrake

[Is static False. Containment is Not Specified.]

◆ forest : Public

ATTRIBUTES

-- Name --
forest

-- Definition --
Uncultivated tree-covered land of considerable extent.

[Is static False. Containment is Not Specified.]

◆ nationalForest : Public

-- Name --
nationalForest (National Forest)

-- Definition --
An area of land proclaimed to be a managed forest under a Forest Act or equivalent legislation.

[Is static False. Containment is Not Specified.]

◆ orchard : Public

-- Name --
orchard

-- Definition --
A piece of land planted with fruit trees.

[Is static False. Containment is Not Specified.]

◆ other : Public

-- Name --
other

-- Definition --
represents type of trees which is not enlisted

[Is static False. Containment is Not Specified.]

◆ palm : Public

-- Name --
palm

-- Definition --
A tract of country, which bears a dense growth of palm trees

[Is static False. Containment is Not Specified.]

◆ pine : Public

-- Name --
pine

-- Definition --
A tract of country, which bears a dense growth of pine trees

[Is static False. Containment is Not Specified.]

◆ plantainTree : Public

-- Name --

ATTRIBUTES

plantainTree (Plantain Tree)

-- Definition --

A tract of country, which bears a dense growth of plantain tree

[Is static False. Containment is Not Specified.]

Tunnel

Class «codeList» in package 'Cadastral_Schema_Model'

-- Name --

Tunnel

-- Definition --

represents possible values of tunnel feature type.

Tunnel

Version 1.0 Phase 1.0 Proposed

ATTRIBUTES

◆ canalTunnel : Public

-- Name --

canalTunnel (Canal Tunnel)

-- Definition --

a waterway used to divert water from its natural course.

[Is static False. Containment is Not Specified.]

◆ mineTunnel : Public

-- Name --

mineTunnel (Mine Tunnel)

-- Definition --

a passage or opening to mine for the purpose of excavation of the valuable geological materials, it may be open to the surface at one end and used for drainage, ventilation, or haulage from the mine workings.

[Is static False. Containment is Not Specified.]

◆ other : Public

-- Name --

other

-- Definition --

represent such types which are not included in the list

[Is static False. Containment is Not Specified.]

◆ railwayTunnel : Public

-- Name --

railwayTunnel (Railway Tunnel)

-- Definition --

ATTRIBUTES

an underground passage for rail traffic.

[Is static False. Containment is Not Specified.]

◆ roadTunnel : Public

-- Name --

roadTunnel (Road Tunnel)

-- Definition --

an underground passage for vehicular road traffic

[Is static False. Containment is Not Specified.]

Urban_RuralV

Class «codeList» in package 'Cadastral_Schema_Model'

-- Name --

Urban_RuralV

-- Definition --

represents the whether the territory is urban or rural

Urban_RuralV

Version 1.0 Phase 1.0 Proposed

ATTRIBUTES

◆ rural : Public

-- Name --

rural

-- Definition --

represents rural territory

[Is static False. Containment is Not Specified.]

◆ urban : Public

-- Name --

urban

-- Definition --

represents urban territory

[Is static False. Containment is Not Specified.]

Wetland

Class «codeList» in package 'Cadastral_Schema_Model'

-- Name --

Wetland

-- Definition --

represents the possible values of the wetland features

Wetland
Version 1.0 Phase 1.0 Proposed

ATTRIBUTES

◆ marsh : Public

-- Name --
marsh

-- Definition --

A tract of land normally saturated with water, having little or no drainage and characterized by a growth of grass or reeds.

[Is static False. Containment is Not Specified.]

◆ other : Public

-- Name --
other

-- Definition --

represent such types which are not included in the list

[Is static False. Containment is Not Specified.]

◆ swamp : Public

-- Name --
swamp

-- Definition --

A tract of land normally saturated with water, having little or no drainage and characterized by a growth of grass or reeds.

[Is static False. Containment is Not Specified.]
